Special Matrices Of Mathematical Physics Stochastic Circulant And Bell Matrices:

Special Matrices of Mathematical Physics Ruben Aldrovandi, 2001 This book expounds three special kinds of matrices that are of physical interest centering on physical examples Stochastic matrices describe dynamical systems of many different types involving or not phenomena like transience dissipation ergodicity nonequilibrium and hypersensitivity to initial conditions The main characteristic is growth by agglomeration as in glass formation Circulants are the building blocks of elementary Fourier analysis and provide a natural gateway to quantum mechanics and noncommutative geometry Bell polynomials offer closed expressions for many formulas concerning Lie algebra invariants differential geometry and real gases and their matrices are instrumental in the study of chaotic mappings

Mathematical Physics And Matrix Representations: The Multiple Applications Of Stochastic, Circulant And Bell Matrices Ruben Aldrovandi, 2025-07-15 This book expounds three kinds of matrices that are of physical interest centering on physical examples Stochastic matrices describe dynamical systems of many different types involving or not phenomena like transience dissipation ergodicity nonequilibrium and hypersensitivity to initial conditions The main characteristic is growth by agglomeration as in glass formation Circulants are the building blocks of elementary Fourier analysis and provide a natural gateway quantum mechanics noncommutative geometry and random walks including some phenomenology like diffusion advection equation and prey predator chains We also present two applications chemical reaction and genetics The last subject may seem specially out of place in Mathematical Physics Our excuse is that Mendelism and blood types are here presented by using just the same methods of the other chapters Bell polynomials offer closed expressions for many formulas concerning Lie algebra invariants differential geometry and real gases and their matrices are instrumental in the study of chaotic mappings

[Statistical Topics and Stochastic Models for Dependent Data with Applications](#) Vlad Stefan Barbu, Nicolas Vergne, 2020-11-03 This book is a collective volume authored by leading scientists in the field of stochastic modelling associated statistical topics and corresponding applications The main classes of stochastic processes for dependent data investigated throughout this book are Markov semi Markov autoregressive and piecewise deterministic Markov models The material is divided into three parts corresponding to i Markov and semi Markov processes ii autoregressive processes

and iii techniques based on divergence measures and entropies A special attention is paid to applications in reliability survival analysis and related fields
