

The Two Relativities

- The Special Theory

- This aims to give an account of the physics of particles that have zero mass, such as photons (particles of light).
- Simplistically, Newton's Second Law says $f=ma$, which means $a=f/m$. But as mass goes to 0 we get an arbitrarily large acceleration for even the tiniest of forces.
- This suggests that the speed of light should be infinite, but that disagrees with observation. So something is wrong. This is the problem the Special Theory sets out to solve.

- The General Theory

- This aims to unify the Special Theory with the established (classical) physics of objects that do have mass.
- So General Relativity = Special Relativity + Gravity.
