Mishra,Anjani Kumar,Pramod K. Joshi,2020-12-30 Debates about public expenditure in the agricultural sector have reopened in many developing and emerging economies because of high budget deficits and changes in public opinion As a result agricultural policy in many of these countries is beginning to take a more market oriented approach to agrarian problems most notably through the introduction of contract farming This book explores the policy issues around contract farming and its transformative potential and addresses the lack of empirical research on this topic by focusing on South Asia principally India Bangladesh and Nepal The book first addresses the effects of contract farming vertical coordination on productivity food security indicators yield consumption expenditures prices employment and input usage Then it draws lessons from the South Asian case studies on the impact of institutional changes like contract farming on income and food security of smallholder households The core of the book includes case study chapters on several commodities that are produced under contract farming including vegetables and fisheries in Bangladesh low value crops in Nepal and coffee in India Other chapters also explore contracts storage input usage and technical efficiency in these cases This book serves as an essential guide to academics researchers students legislative liaisons and think tank groups interested in agrarian issues agricultural economics and agricultural policy in emerging economies and particularly in South Asia      Maize Sukhvinder Singh Purewal,Pinderpal Kaur,Sneh Punia Bangar,Kawaljit Singh Sandhu,Surender Kumar Singh,Maninder Kaur,2022-09-30 Maize is widely cultivated throughout the world due to its high yield potential The economic and nutritional value of maize grains is associated with its starch content protein fibre bioactive compounds and minerals Maize is used worldwide in the preparation of health benefiting antioxidant rich fortified products and dietary supplements Maize Nutritional Composition Processing and Industrial Uses explores the status of maize in terms of its production nutritional composition biofortification processing methods health benefits maize based products and storage This book also emphasizes the key features of maize grains which make it an ideal crop for industrial use It covers all aspects of recent research about the maize and provides updated information Features Discusses information related to chemistry of maize components Highlights comprehensive information on the physical and milling properties of maize Explains the structure functional and antioxidant properties of maize flour Provides the latest scientific development in the modification of maize starch Explores various maize based food products and their storage Examines maize protein scenarios and quality improvement through bio fortification In depth information is provided regarding various health benefiting nutrient components of maize flour offering meaningful information for product formulation This book unfolds the potential of maize grains for industrial use      Cereals Marcelo J.

Carena,2009-04-21 Agriculture depends on improved cultivars and cultivars are developed through proper plant breeding Unfortunately applied plant breeding programs that are focused on cereal commodity crops are under serious erosion because of lack of funding This loss of public support affects breeding continuity objectivity and perhaps equally important the training of future plant breeders and the utilization and improvement of plant genetic resources currently available Breeding programs should focus not only on short term research goals but also on long term genetic improvement of germplasm The research products of breeding programs are important not only for food security but also for commodity oriented public and private programs especially in the fringes of crop production Breeding strategies used for long term selection are often neglected but the reality is that long term research is needed for the success of short term products An excellent example is that genetically broad based public germplasm has significantly been utilized and recycled by industry producing billions of dollars for industry and farmers before intellectual property rights were available Successful examples of breeding continuity have served the sustainable cereal crop production that we currently have The fact that farmers rely on public and private breeding institutions for solving long term challenges should influence policy makers to reverse this trend of reduced funding Joint cooperation between industry and public institutions would be a good example to follow The objective of this volume is to increase the utilization of useful genetic resources and increase awareness of the relative value and impact of plant breeding and biotechnology That should lead to a more sustainable crop production and ultimately food security Applied plant breeding will continue to be the foundation to which molecular markers are applied Focusing useful molecular techniques on the right traits will build a strong linkage between genomics and plant breeding and lead to new and better cultivars Therefore more than ever there is a need for better communication and cooperation among scientists in the plant breeding and biotechnology areas We have an opportunity to greatly enhance agricultural production by applying the results of this research to meet the growing demands for food security and environmental conservation Ensuring strong applied plant breeding programs with successful application of molecular markers will be essential in ensuring such sustainable use of plant genetic resources *Midwest Maize* Cynthia Clampitt,2015-02-28 Food historian Cynthia Clampitt
