Species at Risk Jason F. Shogren, 2014-05-14 Protecting endangered species of animals and plants is a goal that almost everyone supports in principle but in practice private landowners have often opposed the regulations of the Endangered Species Act which they argue unfairly limits their right to profit from their property To encourage private landowners to cooperate voluntarily in species conservation and to mitigate the economic burden of doing so the government and nonprofit land trusts have created a number of incentive programs including conservation easements leases habitat banking habitat conservation planning safe harbors candidate conservation agreements and the no surprise policy In this book lawyers economists political scientists historians and zoologists come together to assess the challenges and opportunities for using economic incentives as compensation for protecting species at risk on private property They examine current programs to see how well they are working and also offer ideas for how these programs could be more successful Their ultimate goal is to better understand how economic incentive schemes can be made both more cost effective and more socially acceptable while respecting a wide range of views regarding opportunity costs legal standing biological effectiveness moral appropriateness and social context

Capitalizing on Nature Edward B. Barbier, 2011-09-08 The basic unit of nature the ecosystem is a special form of wealth which we can think of as a stock of natural capital However perhaps because this capital is free we have tended to view it as limitless abundant and always available for our use exploitation and conversion Capitalizing on Nature shows how modeling ecosystems as natural capital can help us to analyze the economic behavior that has led to the overuse of so much ecological wealth It explains how this concept of ecosystem as natural capital sheds light on a number of important issues including landscape conversion ecological restoration ecosystem resilience and collapse spatial benefits and

Introduction to Environmental Economics Nick Hanley, Jason Shogren, Ben White, Benedict White, 2013-01-31 Part

one explains the fundamental economic concepts *Rebuilding the Ark* Jonathan Adler, 2011-06-16 The Endangered Species Act ESA may be the most powerful environmental law in the United States Enacted in 1973 the ESA prohibits any actions that may cause harm to endangered plants and animals or the ecosystems upon which they depend But although more than 1 200 species are protected under the Act most remain in peril The ESA may have saved some species from the brink of extinction but there is little evidence it is working as intended to recover endangered and threatened species In some cases the Act s extensive regulatory requirements may actually discourage conservation efforts In *Rebuilding the Ark* New Perspectives on Endangered Species Act Reform Jonathan H Adler leads a group of environmental law experts in evaluating the ESA s successes and failures and exploring multiple avenues for reform The authors examine methods for incentivizing conservation on private land and water for revising and standardizing the ESA s regulatory framework and for increasing transparency accountability and public participation in the Fish and Wildlife Service and other conservation agencies *Rebuilding the Ark* also considers how the Act should be reformed to address the threat of climate change and how ESA reform in the United States may affect species conservation overseas The Endangered Species Act has not been altered for over twenty five years Debates over ESA reform are often contentious and hampered by partisan infighting and pressure from interest groups But reform is crucial if we are to achieve the ESA s ambitious goals and conserve the world s endangered plants and animals *Rebuilding the Ark* is a valuable resource for policymakers conservationists business owners and concerned citizens alike **SIDA, Contributions to Botany** ,2005 **Journal of Economic Literature** ,2005
