Phonological Encoding and Monitoring in Normal and Pathological Speech Robert J. Hartsuiker, 2005 This book reports recent research on mechanisms of normal formulation and control in speaking and in language disorders such as stuttering aphasia and verbal dyspraxia The theoretical claim is that such disorders result both from deficits in a component of the language production system and interactions between this component and the system that monitors for errors and undertakes a corrective behaviour In particular the book focuses on phonological encoding in speech the construction of a phonetic plan for utterances on verbal self monitoring checking for correctness and initiating corrective action if necessary and on interactions between these processes Bringing together sixteen original chapters by leading international researchers this volume represents a coherent statement of current thinking in this exciting field The aim is to show how psycholinguistic models of normal speech processing can be applied to the study of impaired speech production This book will prove invaluable to any researcher student or speech therapist looking to bridge the gap between the latest advances in theory and the implications of these advances for language and speech pathology

*Cognitive Neuropsychological Approaches to*

*Spoken Word Production* Lyndsey Nickels, 2002 The papers in this volume all examine the nature of spoken word production in aphasia and how this can inform current theories of language processing It comprises 7 papers by some of the foremost researchers in the field The first paper in the volume is an introduction by the editor Dr Lyndsey Nickels which reviews the state of the art of the cognitive neuropsychology of spoken word production both in terms of theory and methodology The individual papers address a range of topical issues including the levels of processing in speech production Lambon Ralph Moriarty Sage et al Wilshire the nature of the interaction between levels of processing Goldrick and effects of different factors on naming word class and context Berndt Burton Haendiges phonemic and orthographic cues Best Herbert Hickin Osborne lexical stress Howard Smith Taken together this volume provides the reader with an insight into the cutting edge of research in spoken word production

**Linguistic Structure in Language Processing** G.N. Carlson, M.K. Tanenhaus, 2012-12-06 The papers in this volume are intended to exemplify the state of experimental psycholinguistics in the middle to later 1980s Our overriding impression is that the field has come a long way since the earlier work of the 1950s and 1960s and that the field has emerged with a renewed strength from a difficult period in the 1970s Not only are the theoretical issues more sharply defined and integrated with existing issues from other domains modularity being one such example but the experimental techniques employed are much more sophisticated thanks to the work of numerous psychologists not necessarily interested in psycholinguistics and thanks to improving technologies unavailable a few years ago for instance eye trackers We selected papers that provide a coherent overall picture of existing techniques and issues The volume is organized much as one might organize an introductory linguistics course beginning with sound and working up to meaning Indeed the first paper Rebecca Treiman's begins with consideration of syllable structure a phonological consideration and the last Alan Garnham's exemplifies some work on the interpretation of pronouns a semantic matter In between are found works concentrating on morphemes lexical structures and syntax The cross section represented in this volume is by necessity incomplete since we focus only on experimental work directed at understanding how adults comprehend and produce language We do not include any works on language acquisition first or second

*Language and Communication* Jack C. Richards, R.W. Schmidt, 2014-06-06 Presents eight specially written chapters which provide a coherent survey of major issues in the study of language and communication and which show how these are related to questions of practical concern in the learning and teaching of second and foreign languages The issues discussed have been selected primarily for their relevance to applied linguistics and there is a unifying interest in how language reflects the communicative functions it performs as well as in the process involved in using language for communication Each chapter presents a self-contained survey of a central issue is prefaced by an introduction linking the different perspectives and is followed by discussion questions to aid effective use of the text in applied linguistics courses

*Spontaneous Speech*

Benjamin V. Tucker, Yoichi Mukai, 2023-02-23 Phonetic research investigates how speakers and listeners use speech to convey messages. The speech produced to encode a particular message can vary wildly. Understanding and explaining the phonetic variability embodied in this example is one of the main motivations for this Element. Why and how do speakers produce this variability and how does it impact listeners? This Element focuses on spontaneous speech and its relationship with phonetic research. The authors discuss background and describe research investigating the variation that occurs when speakers and listeners are engaged in spontaneous conversational speech. As a result, this Element explores aspects of spontaneous speech from the phonetic perspective using both production and perception areas of phonetics. This Element focuses on spontaneous speech and its relationship with phonetic research, exploring aspects of spontaneous speech from the phonetic perspective using both production and perception areas of phonetics. *Aspects of Language Production* Linda Wheeldon, 2013-12-16 This volume represents major research issues in language production today, presenting readers with a picture of the breadth of current research in the field. Contributors have focused on models of visual word processing, aphasic speech, object recognition, and language production in children. Many chapters highlight the need for psychological models of language production to learn from theoretical linguistics in order to become better informed about the structure of language itself. Therefore, this volume also includes chapters written by linguists for psychologists, which serve to remind us of the complexity of structure and process in the languages of the world. **Natural Language Generation** G.A. Kempen, 2012-12-06 Proceedings of the NATO Advanced Research Workshop Nijmegen, The Netherlands, August 19-23, 1986. *Grammatical Theory* Frederick J. Newmeyer, 1983-09-15 Newmeyer persuasively defends the controversial theory of transformational generative grammar. Grammatical Theory is for every linguist, philosopher, or psychologist who is skeptical of generative grammar and wants to learn more about it. Newmeyer's formidable scholarship raises the level of debate on transformational generative grammar. He stresses the central importance of an autonomous formal grammar, discusses the limitations of discourse-based approaches to syntax, cites support for generativist theory in recent research, and clarifies misunderstood concepts associated with generative grammar. The Articulate Mammal Jean Aitchison, 2007-09-12 An established bestseller, *The Articulate Mammal* is a concise and highly readable introduction to the main topics in psycholinguistics. This fifth edition brings the book up to date with recent theories, including new material on the possibility of a language gene, post-Chomskyan ideas, language within an evolutionary framework, spatial cognition, and how this affects language. How children become acclimatized to speech rhythms before birth, the acquisition of verbs, construction, and cognitive grammar, aphasia, and dementia. Requiring no prior knowledge of the subject, chapter by chapter, *The Articulate Mammal* tackles the basic questions central to the study of psycholinguistics. Jean Aitchison investigates these issues with regard to animal communication, child language, and the language of adults, and includes in the text full references and helpful suggestions for further reading.
