Speech Recognition: Invited Papers Presented at the 1974 IEEE Symposium, D. Raj Reddy, Ed. (New York: Academic, 1975, 542 pp., \$17.00). *Reviewed by Jared J. Wolf.*

This book is the result of the IEEE Symposium on Speech Recognition, held at Carnegie-Mellon University, Pittsburgh, PA, April 15-19, 1974. Most of the contributed papers appeared in the *Symposium Proceedings* [1], and many of them appeared in a Special Issue of this *TRANSACTIONS* in February 1975. This book contains the 20 invited papers, not available elsewhere, and the keynote address by Gunnar Fant.

The book is divided into five subject areas, corresponding to the topics of the five days of the conference. Each section is headed by a tutorial paper on the subject area. These subject areas and the authors represented therein are:

- 1) Systems (Newell; Martin; Demow; Newberg)
- 2) Parameter and Feature Extraction (Schafer and Rabiner; Gentileman; Morf; Kallath, and Dickenson; Makhoul; Atal; Markel and Gray)
- 3) Acoustic-Phonetics (Broad and Shoup; Cohen and Mercer; Klatt)
- 4) Syntax and Semantics (Woods; Robinson; Hayes and Simon)

5) Systems Organization (Reddy and Erman; Lesser; Barnett; Baker)

These papers cover virtually all of the topics of relevance to the general problem of speech recognition. (The only omission that springs to mind is prosody.) Particularly noteworthy are the tutorial papers that begin each section. There is little description of specific systems or specific implementations; most of the papers are concerned with the intellectual framework on which systems are built.

Although isolated or discrete word recognition is an important subtopic of speech recognition, only one paper (by Martin) deals with it in any depth. The remainder address the more general problems of continuous speech recognition and understanding. (Most of the papers are by people affiliated with the recent ARPA Speech Understanding Project.) In fact, this book contains what is probably the first comprehensive accounts of specifically how higher level linguistic constraints can be applied to the speech recognition problem.

The only lack that one feels upon reading through this book (and it is one for which the Editor and the authors can hardly be blamed) is that it leaves uncovered all that has happened in this rapidly moving field in the meantime, the latter two and a half years of the ARPA Speech Understanding Project and the corresponding work done elsewhere. However, that is the province of later books. There is little in this volume that is obsolete; one can hardly hope to enter this field without being familiar with its contents.
