Speech Science Technology:

Speech Dynamics Felicitas Kleber, Tamara Rathcke, 2024-10-07 The relationship between diachronic change and synchronic variation at the articulatory auditory acoustic and social level is one of the greatest puzzles in the study of language Even though plentiful examples exist to suggest that dynamics of synchronic variation and diachronic change are tightly interconnected a unified theory to account for language change in its relationship to all layers of synchronic variation remains a desideratum This volume compiles new evidence from articulatory acoustic auditory sociolinguistic and phonological analyses of segmental and prosodic data and computational modelling and offers a refreshing theoretical angle on the ongoing debates in language change The volume is divided into three sections each focusing on one aspect of speech dynamics the historical the emerging and the theoretical each making a step toward a unified view of speech dynamics at the interface of synchronic variation and diachronic change The large range of methodologies and theories represented in this book will appeal to scholars from a variety of linguistic fields with an interest in speech dynamics including phoneticians phonologists sociolinguists typologists computational and historical linguists

Speech Rhythm in Varieties of English Robert Fuchs, 2015-09-25 This book addresses the question whether Educated Indian English is more syllable timed than British English from two standpoints production and perception Many post colonial varieties of English which are mostly spoken as a second language in countries such as India Nigeria and the Philippines are thought to have a syllable timed rhythm whereas first language varieties such as British English are characterized as being stress timed While previous studies mostly relied on a single acoustic correlate of speech rhythm usually duration the author proposes a multidimensional approach to the production of speech rhythm that takes into account various acoustic correlates The results reveal that the two varieties differ with regard to a number of dimensions such as duration sonority intensity loudness pitch and glottal stop insertion The second part of the study addresses the question whether the difference in speech rhythm between Indian and British English is perceptually relevant based on intelligibility and dialect discrimination experiments The results reveal that speakers generally find the rhythm of their own variety more intelligible and that listeners can identify which variety a speaker is using on the basis of differences in speech rhythm
