Textbook of Uncommon Cancer Christopher John Hacon Williams, 1988-07 Reviews the current literature on tumors at rare sites and uncommon tumors of specific type Specialists from the UK USA Europe Japan and Australia discuss recent research on a wide range of different cancers and describe their own unique clinical experiences Each chapter deals with a different type of cancer such as gynecological tumors thoracic tumors tumors of the nervous system and head tumors and covers the biology pathology diagnosis and treatment of each Specifically designed to help those responsible for patient management particularly the practicing clinician in order to provide the optimal management for patients with uncommon cancers **Journal of the National Cancer Institute** , 1992-07 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews

and commentary on timely topics Management of rare adult tumours Yazid Belkacemi, René-Olivier Mirimanoff, Mahmut Ozsahin, 2011-02-02 Why a book dedicated to rare cancer management Given the large variety of rare cancers they take up a significant part of our daily practice Therefore we owe it to our patients with rare tumours that we use the knowledge gained in the treatment of the more common cancers to provide them with a better future This knowledge comes from recent developments in molecular diagnostics systemic treatments with new drugs and targeted therapies together with advanced technologies in the areas of radiology and radiation therapy Our authors have analysed the literature and recommend treatments for rare cancers based on results from past studies We hope that this book will be an aid to those treating rare cancer cases about which up to now little has been published and will reassure our patients that they have not been forgotten

Selected Topics in Clinical Oncology J.M. Debois, 2012-12-06 By Prof Dr A T Van Oosterom Head of the Department of Oncology at the Catholic University of Leuven Belgium The word cancer defines over 180 different diseases Some occurring quite often and are well known others are very rare and sometimes so unknown that the diagnosis is not even suspected at operation In this book Dr Debois a retired radiation oncologist describes a selected group of cancer types some of which are difficult to find in the standard textbooks in a logical format starting with their bibliography history incidence anatomy clinical presentation diagnosis and staging treatment and follow up For the general oncologist in the community it gives the appropriate data to understand the described diseases and to familiarize him with the peculiar patient he has identified The many tables and figures in every chapter contain an enormous amount of data difficult to collect without extensive searches The mix of historical and new genetic data makes reading attractive In my opinion this book will find his place in the library of every oncologist who wants to know more about the rarer tumors he or she encounters We know a lot about the common tumors but too little about the diseases described here **Murray & Nadel's Textbook of Respiratory Medicine E-Book**
