

Théorie de Galois

Dans ce document, tous les anneaux sont commutatifs, K désigne un corps commutatif, et on appelle *K -algèbre* tout anneau commutatif A avec un morphisme d'anneaux $K \rightarrow A$. Si $A \neq \{0\}$, alors le morphisme $K \rightarrow A$ est injectif, et on peut identifier K à un sous-corps de A . Une K -algèbre A est naturellement un K -espace vectoriel. On note sa dimension $[A : K]$. On dit que $[A : K]$ est le degré de A .

Si A et B sont deux K -algèbres, un morphisme de K -algèbres $A \rightarrow B$ est un morphisme d'anneaux qui est K -linéaire.

Une K -algèbre qui est un corps s'appelle une *extension* de K .

Exemple. $\mathbb{C}$ est une extension de degré 2 de $\mathbb{R}$ et la conjugaison complexe $\mathbb{C} \rightarrow \mathbb{C}$ est un morphisme (en fait un automorphisme) d'extensions de $\mathbb{R}$.

1 Algèbres finies sur un corps

Dans cette partie, A est une K -algèbre finie, c'est-à-dire de degré fini. Pour tout $x \in A$, on note m_x la multiplication par x (l'application de A dans A définie par $m_x(y) = xy$). C'est un endomorphisme du K -espace vectoriel de dimension finie A .

Proposition 1.1. *Si A est intègre, alors A est un corps.*

Démonstration. Soit x un élément non nul de A . Alors m_x est injectif parce que A est intègre. Comme A est de dimension finie sur K , m_x est surjectif, en particulier il existe $y \in A$ tel que $xy = 1$. Cela montre que A est un corps. $\square$

Corollaire 1.2. *Tout idéal premier de A est maximal.*

Démonstration. Si p est un idéal premier de A , appliquer la proposition à A/p . $\square$

Proposition 1.3. *L'algèbre A a au plus $[A : K]$ idéaux maximaux.*

Abel's Proof Peter Pesic, 2016-06-17 The intellectual and human story of a mathematical proof that transformed our ideas about mathematics In 1824 a young Norwegian named Niels Henrik Abel proved conclusively that algebraic equations of the fifth order are not solvable in radicals In this book Peter Pesic shows what an important event this was in the history of thought He also presents it as a remarkable human story Abel was twenty one when he self published his proof and he died five years later poor and depressed just before the proof started to receive wide acclaim Abel's attempts to reach out to the mathematical elite of the day had been spurned and he was unable to find a position that would allow him to work in peace and marry his fianc But Pesic's story begins long before Abel and continues to the present day for Abel's proof changed how we think about mathematics and its relation to the real world Starting with the Greeks who invented the idea of mathematical proof Pesic shows how mathematics found its sources in the real world the shapes of things the accounting needs of merchants and then reached beyond those sources toward something more universal The Pythagoreans attempts to deal with irrational numbers foreshadowed the slow emergence of abstract mathematics Pesic focuses on the contested development of algebra which even Newton resisted and the gradual acceptance of the usefulness and perhaps even beauty of abstractions that seem to invoke realities with dimensions outside human experience Pesic tells this story as a history of ideas with mathematical

details incorporated in boxes The book also includes a new annotated translation of Abel's original proof
