*Beginning Functional Analysis* Karen Saxe, 2013-04-17 This book is designed as a text for a first course on functional analysis for ad vanced undergraduates or for beginning graduate students It can be used in the undergraduate curriculum for an honors seminar or for a capstone course It can also be used for self study or independent study The course prerequisites are few but a certain degree of mathematical sophistication is required A reader must have had the equivalent of a first real analysis course as might be taught using 25 or 109 and a first linear algebra course Knowledge of the Lebesgue integral is not a prerequisite Throughout the book we use elementary facts about the complex numbers these are gathered in Appendix A In one spe cific place Section 5 3 we require a few properties of analytic functions These are usually taught in the first half of an undergraduate complex analysis course Because we want this book to be accessible to students who have not taken a course on complex function theory a complete description of the needed results is given However we do not prove these results

**California. Court of Appeal (4th Appellate District). Division 1. Records and Briefs** California (State)., **The Minimal Polynomials of Unipotent Elements in Irreducible Representations of the Classical Groups in Odd Characteristic** Irina D. Suprunenko, 2009-06-05 The minimal polynomials of the images of unipotent elements in irreducible rational representations of the classical algebraic groups over fields of odd characteristic are found These polynomials have the form  $t^{1-d}$  and hence are completely determined by their degrees In positive characteristic the degree of such polynomial cannot exceed the order of a relevant element It occurs that for each unipotent element the degree of its minimal polynomial in an irreducible representation is equal to the order of this element provided

the highest weight of the representation is large enough with respect to the ground field characteristic On the other hand classes of unipotent elements for which in every nontrivial representation the degree of the minimal polynomial is equal to the order of the element are indicated In the general case the problem of computing the minimal polynomial of the image of a given element of order  $p^s$  in a fixed irreducible representation of a classical group over a field of characteristic  $p \geq 2$  can be reduced to a similar problem for certain  $s$  unipotent elements and a certain irreducible representation of some semisimple group over the field of complex numbers For the latter problem an explicit algorithm is given Results of explicit computations for groups of small ranks are contained in Tables I XII The article may be regarded as a contribution to the programme of extending the fundamental results of Hall and Higman 1956 on the minimal polynomials from  $p$  solvable linear groups to semisimple groups

**Potential Wadge Classes** Dominique Lecomte, 2013-01-25 Let  $\Gamma$  be a Borel class or a Wadge class of Borel sets and  $2 \leq d \leq \omega$  be a cardinal A Borel subset  $B$  of  $\mathbb{R}^d$  is potentially in  $\Gamma$  if there is a finer Polish topology on  $\mathbb{R}$  such that  $B$  is in  $\Gamma$  when  $\mathbb{R}^d$  is equipped with the new product topology The author provides a way to recognize the sets potentially in  $\Gamma$  and applies this to the classes of graphs oriented or not quasi orders and partial orders

**Structure Theory for Canonical Classes of Finite Groups** Wenbin Guo, 2015-04-23 This book offers a systematic introduction to recent achievements and development in research on the structure of finite non simple groups the theory of classes of groups and their applications In particular the related systematic theories are considered and some new approaches and research methods are described e g the  $F$  hypercenter of groups  $X$  permutable subgroups subgroup functors generalized supplementary subgroups quasi  $F$  group and  $F$  cohypercenter for Fitting classes At the end of each chapter we provide relevant supplementary information and introduce readers to selected open problems
