Forecasts in Times of Crises Theo S. Eicher, David J. Kuenzel, Mr. Chris Papageorgiou, Charis Christofides, 2018-03-09 Financial crises pose unique challenges for forecast accuracy Using the IMF's Monitoring of Fund Arrangement MONA database we conduct the most comprehensive evaluation of IMF forecasts to date for countries in times of crises We examine 29 macroeconomic variables in terms of bias efficiency and information content to find that IMF forecasts add substantial informational value as they consistently outperform naive forecast approaches However we also document that there is room for improvement two thirds of the key macroeconomic variables that we examine are forecast inefficiently and 6 variables growth of nominal GDP public investment private investment the current account net transfers and government expenditures exhibit significant forecast bias Forecasts for low income countries are the main drivers of forecast bias and inefficiency reflecting perhaps larger shocks and lower data quality When we decompose the forecast errors into their sources we find that forecast errors for private consumption growth are the key contributor to GDP growth forecast errors Similarly forecast errors for non interest expenditure growth and tax revenue growth are crucial determinants of the forecast errors in the growth of fiscal budgets Forecast errors for balance of payments growth are significantly influenced by forecast errors in goods import growth The results highlight which macroeconomic aggregates require further attention in future forecast models for countries in crises

Congress. House. Committee on Public Works and Transportation. Subcommittee on Investigations and Oversight, 1984 The Oxford Handbook of Economic Forecasting Michael P. Clements, David F. Hendry, 2011-07-08 Greater data availability has been coupled with developments in statistical theory and economic theory to allow more elaborate and complicated models to be entertained These include factor models DSGE models restricted vector autoregressions and non linear models FY 1996 DOE, EPA, and NOAA R&D Budget Authorizations United States. Congress. House. Committee on Science. Subcommittee on Energy and Environment, 1995 Criminal Justice Forecasts of Risk Richard Berk, 2012-04-06 Machine learning and nonparametric function estimation procedures can be effectively used in forecasting One important and current application is used to make forecasts of future dangerousness to inform criminal justice decision Examples include the decision to release an individual on parole determination of the parole conditions bail recommendations and sentencing Since the 1920s risk assessments of various kinds have been used in parole hearings but the current availability of large administrative data bases inexpensive computing power and developments in statistics and computer science have increased their accuracy and applicability In this book these developments are considered with particular emphasis on the statistical and computer science tools under the rubric of supervised learning that can dramatically improve these kinds of forecasts in criminal justice settings The intended audience is researchers in the social sciences and data analysts in criminal justice agencies *Company Valuation and Information in Analyst Forecasts* Daniel Kreutzmann, 2010 This thesis focuses on the three primitive value drivers of each company valuation model that is based on fundamental analysis the discount rate the expected future payoffs during the explicit forecasting period and the terminal value at the end of the explicit forecasting period While the first factor is analyzed theoretically by incorporating the government into the classical valuation framework this thesis studies the other two factors by investigating forecasts made by professional investors i e financial analysts In the first part we show that the government's and the shareholders discount rate usually differ and analyze how the government's and shareholders different objectives lead to conflicts in the context of capital budgeting The empirical part of this thesis shows that macroeconomic information is frequently used by financial analysts when updating their earnings expectations and that target price forecasts made by financial analysts can be used to predict abnormal returns **Energy Demand Forecasting** United States. Congress. House. Committee on Science and Technology. Subcommittee on Investigations and Oversight, 1981 **World Economic and Financial Surveys, 1988** International Monetary Fund, 1988-01-01 This paper examines the World Economic Outlook forecasting record for the principal performance indicators for the major industrial countries and corresponding aggregates

and for groups of non oil developing countries Several criteria were used in evaluating the forecasts the computation and evaluation of various summary statistics of forecast accuracy bias and efficiency comparisons with alternative forecasts naive forecasts and forecasts produced by the Organization for Economic Cooperation and Development OECD and by national forecasting agencies the examination of turning point errors and forecast performance in defined episodes and finally some attempt to explain forecast error in terms of unanticipated developments in policy variables and oil prices In judging the forecast performance of the World Economic Outlook a number of points must be kept in mind Most important it has to be recognized that the period since the inception of the World Economic Outlook as a regular forecasting exercise has been extraordinarily rich in economic upheavals which have made the odds against accurate forecasting formidable
