QUEEN'S CHAMBER
Unlikely to have held a queen's body, as Ancient Egyptian pyramids were built for one dead person.

Each side at the base is 756ft long

HOW THEY FOUND THE NEW CHAMBER

The technology measured muons, a by-product of cosmic rays from stars exploding in the universe and raining down to earth at nearly the speed of light. More muons pass through voids than through stone, as stone absorbs them. Detectors were placed in the Queen's chamber, the descending passageway and outside the pyramid near its north face.

Silver film plates were used to detect the movement of muons. Images were produced including the one below, showing the void.
