Fire Walter M. Haessler, 2020-08-26 This book is devoted to the complex nature of fire the intricacies of the combustion process the influence of chemical and physical properties of fuels and the proper means of fire extinguishment It lists sequentially the various factors in the combustion process

Flame Retardants P. M. Visakh, Yoshihiko Arao, 2015-02-04 This book summarizes comprehensively many recent technical research accomplishments in the area of flame retardant research It presents mainly flame retardant studies of polymer blends composites and nano composites such as rubber thermosets and thermoplastics This book discusses different types of flame retardant using in polymers especially nano composites as well as the role and chemistry Leading researchers from industry academy government and private research institutions across the globe contribute to this book Academics researchers scientists engineers and students in research and development will benefit from an application oriented book that helps them to find solutions to both fundamental and applied problems

A Mathematical Model for Predicting Fire Spread in Wildland Fuels Richard C. Rothermel, 1972 A mathematical fire model for predicting rate of spread and intensity that is applicable to a wide range of wildland fuels and environment is presented Methods of incorporating mixtures of fuel sizes are introduced by weighting input parameters by surface area The input parameters do not require a prior knowledge of the burning characteristics of the fuel

USDA Forest Service Research Paper INT., 1972

Metal-Polymer Systems Jörg Florian Friedrich, 2017-09-18 The result of decades of research by a pioneer in the field this is the first book to deal exclusively with achieving high performance metal polymer composites by chemical bonding Covering both the academic and practical aspects the author focuses on the chemistry of interfaces between metals and polymers with a particular emphasis on the chemical bonding between the different materials He elucidates the various approaches to obtaining a stable interface including but not limited to thermodynamically driven redox reactions bond protection to prevent hydrolysis the introduction of barrier layers and stabilization by spacer molecules Throughout chemical bonding is promoted as a simple and economically viable alternative to adhesion based on reversible weak physical interaction Consequently the text equips readers with the practical tools necessary for designing high strength metal polymer composites with such desired properties as resilience flexibility rigidity or degradation resistance
