CONODONTS FROM THE CARNIAN-NORIAN BOUNDARY (UPPER TRIASSIC) OF BLACK BEAR RIDGE, NORTHEASTERN BRITISH COLUMBIA, CANADA MICHAEL J. ORCHARD, 2014     At the Top of the Grand Staircase Alan L. Titus, Mark A. Loewen, 2013-10-09 The Grand Staircase-Escalante National Monument is the location of one of the best known terrestrial records for the late Cretaceous Prior fieldwork confirmed the richness of the area but a major effort begun in the new century has documented over 2 000 new vertebrate fossil sites provided new radiometric dates and identified five new genera of ceratopsids two new species of hadrosaur a probable new genus of hypsilophodontid new pachycephalosaurs and ankylosaurs several kinds of theropods including a new genus of oviraptor and a new tyrannosaur plus the most complete specimen of a Late Cretaceous therizinosaur ever collected from North America and much more The research documented in this book is rewriting our understanding of Late Cretaceous paleobiogeography and dinosaur phylogenetics At the Top of the Grand Staircase The Late Cretaceous of Southern Utah is a major stepping stone toward a total synthesis of the ecology and evolution of the Late Cretaceous ecosystems of western North America     Geology and Paleontology of Seymour Island, Antarctic Peninsula Rodney M. Feldmann, Michael O. Woodburne, 1988     Review of the Upper Silurian and Lower Devonian Articulate Brachiopods of Podolia O. I. Nikiforova, T. L. Modzalevskaya, Michael G. Bassett, 1985     **A Manual of Practical Laboratory and Field Techniques in Palaeobiology** O.R. Green, 2013-03-09 The user This manual is designed for the use of geo scientists with an interest and need in developing palaeobiological materials as a potential source of data To meet this objective practical procedures have been formatted for use by both professional and semi professional students with an initial understanding of palaeobiological research aims as a primary source of scientific data I have attempted to provide an explanation and understanding of practical procedures which may be required by students undertaking palaeobiological projects as part of a degree course The layout of this manual should be particularly beneficial in the instruction and training of geotechnologists and museum preparators Graduate students and scientists requiring an outline of a preparation procedure will also be able to use the manual as a reference from which to assess the suitability of a procedure This manual is also intended for use by the committed amateur Many of the techniques described in this manual have been devised by non palaeontologists and developed from methods used in archaeology zoology and botany as well as other areas of geology A

considerable number of the methods can be undertaken by the amateur and in the case of many of the field procedures should be used This will ensure that specimens and samples can be conserved in such a manner as to facilitate any later research and not invalidate the results of subsequent geochemical analytical techniques which might be employed

**The Great Ordovician Biodiversification Event** B. D. Webby, 2004 Two of the greatest evolutionary events in the history of life on Earth occurred during Early Paleozoic time The first was the Cambrian explosion of skeletonized marine animals about 540 million years ago The second was the Great Ordovician Biodiversification Event which is the focus of this book This is the first book devoted specifically to establishing the global patterns of differentiation of Ordovician biotas through time and space It provides extensive genus and species level diversity data for the many Ordovician fossil groups and presents an evaluation of how each group diversified with assessments of patterns of change and rates of origination and extinction

**A Global Synthesis of the Ordovician System: Part 1** D.A.T. Harper, B. Lefebvre, I. G. Percival, T. Servais, 2023-06-07 The Ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity an immense biodiversification swings in climate and sea levels and the first Phanerozoic mass extinction A Global Synthesis of the Ordovician System is presented in two volumes in The Geological Society Special Publications This first volume SP532 charts the history of the Ordovician System and explores significant advances in our understanding of its biostratigraphy including more precise calibration of its timescale with tephra chronology and regional alignments using astrochronology and cyclostratigraphy Changes in the world's oceans their shifting currents and sea levels the biogeography of their biotas and the ambient climate are described and discussed against a background of changing palaeogeography This first volume also includes syntheses of the Ordovician geology for most European countries including historical key areas such as Great Britain Baltoscandia and Bohemia The second volume SP533 provides synthetic aspects of the Ordovician geology of most other parts of the world

**Plankton Stratigraphy: Volume 2, Radiolaria, Diatoms, Silicoflagellates, Dinoflagellates and Ichthyoliths** Hans M. Bolli, John B. Saunders, Katharina Perch-Nielsen, 1989-05-25 This comprehensive synthesis of our knowledge of the biostratigraphy of marine plankton is the work of an international team of eighteen authors It covers all the major fossil groups that can be used to date sediments and rocks in the time interval Late Mesozoic to Holocene Altogether more than 3200 taxa are considered almost all of which are illustrated and depicted on range charts making the book a valuable work of reference in the earth sciences For ease of reference by specialists interested in either calcareous or non calcareous microfossils the original work is now divided into two independent volumes Volume 2 describes siliceous and other non calcareous microfossils covering radiolaria diatoms silicoflagellates dinoflagellates and ichthyoliths

*The Geology of England and Wales* P. J. Brenchley, Peter Franklin Rawson, 2006 This second edition of *The Geology of England and Wales* is considerably expanded from its predecessor reflecting the increase in our knowledge of the region and particularly of the offshore areas Forty specialists have contributed to 18 chapters which cover a time range from 700 million

years ago to 200 million years into the future A new format places all the chapters in approximately temporal order Both offshore and economic geology now form an integral part of appropriate chapters

**Catalogue of Type, Figured and Cited Fossils in the National Museum of Wales** Robert Maurice Owens, Michael G. Bassett, National Museum of Wales, 1995 This catalogue lists all type and figured fossils those described illustrated or referred to by geologists in scientific publications up to the end of 1994

**Paleontology and Geology of the Upper Jurassic Morrison Formation** John R. Foster, Spencer G. Lucas, 2006-01-01

**Dinosaur Paleobiology** Stephen L. Brusatte, 2012-04-30 The study of dinosaurs has been experiencing a remarkable renaissance over the past few decades Scientific understanding of dinosaur anatomy biology and evolution has advanced to such a degree that paleontologists often know more about 100 million year old dinosaurs than many species of living organisms This book provides a contemporary review of dinosaur science intended for students researchers and dinosaur enthusiasts It reviews the latest knowledge on dinosaur anatomy and phylogeny how dinosaurs functioned as living animals and the grand narrative of dinosaur evolution across the Mesozoic A particular focus is on the fossil evidence and explicit methods that allow paleontologists to study dinosaurs in rigorous detail Scientific knowledge of dinosaur biology and evolution is shifting fast and this book aims to summarize current understanding of dinosaur science in a technical but accessible style supplemented with vivid photographs and illustrations The Topics in Paleobiology Series is published in collaboration with the Palaeontological Association and is edited by Professor Mike Benton University of Bristol Books in the series provide a summary of the current state of knowledge a trusted route into the primary literature and will act as pointers for future directions for research As well as volumes on individual groups the series will also deal with topics that have a cross cutting relevance such as the evolution of significant ecosystems particular key times and events in the history of life climate change and the application of a new techniques such as molecular palaeontology The books are written by leading international experts and will be pitched at a level suitable for advanced undergraduates postgraduates and researchers in both the paleontological and biological sciences Additional resources for this book can be found at <http://www.wiley.com/go/brusatte/dinosaurpaleobiology>

**Vertebrate Paleontology in Utah** David D.

Gillette, 1999 The 52 papers in this vary in content from summaries or state of knowledge treatments to detailed contributions that describe new species Although the distinction is subtle the title Vertebrate Paleontology in Utah indicates the science of paleontology in the state of Utah rather than the even more ambitious intent if it were given the title Vertebrate Paleontology of Utah which would promise an encyclopedic treatment of the subject The science of vertebrate paleontology in Utah is robust and intense It has grown prodigiously in the past decade and promises to continue to grow indefinitely This research benefits everyone in the state through Utah's museums and educational institutions which are the direct beneficiaries
