Specialty Polymers R. W. Dyson, 2012-12-06 R W DYSON There will be few readers of this book who are not aware of the contribution that polymers make to modern life They are to be seen around the home at work in transport and in leisure pursuits They take many forms which include plastic mouldings and extrusions plastic film and sheet plastic laminates fibreglass and formica rubber gloves hoses tyres and sealing rings fibres for textiles and carpets and so on cellular products for cushioning and thermal insulation adhesives and coating materials such as paints and varnishes The majority of these polymers are synthetic and are derived from oil products The most important of these in terms of tonnage used are polymers based upon styrene vinyl chloride ethylene propylene and butadiene among plastics and rubber materials and nylons polyethylenetere phthalate and polyacrylonitrile among fibres The total amount of these polymers used each year runs into millions of tonnes These polymers are sometimes known as commodity polymers because they are used for everyday artefacts They are available in many grades and formats to meet a variety of applications and processing techniques The and light stabilizers properties can be adjusted by using additives such as heat plasticizers and reinforcing materials Often grades are specially designed and formulated to meet particular requirements and in a sense these might be regarded as specialities Much has been written about these materials elsewhere and they are not the concern of this book Specialty Polymers Faiz Mohammad, 2007 The synthetic counterparts of natural polymeric materials are now finding applications as light weight mechanically strong and environmentally stable sheets fibers films adhesives paints and foams have replaced most of the commodity and structural materials The systematic research on the preparation characterization and utilization of plastics resulted in creation of polymers often containing a set of several desirable properties in a single polymer The polymers have established their place in engineering applications as well Although the bulk of plastics production focuses on relatively simple commodity polymers the proportion of specially designed and tailor made plastics for specific and sophisticated applications is also increasing at a great pace The specialty plastics as well as their use in specific and sophisticated applications are the key to the continued scientific growth and technological advances in the new millennium This book thoroughly covers today s rapidly growing field of specialty polymers and their applications in more sophisticated and specialized areas It gives the most recent in depth knowledge and extremely comprehensive details of the chemistry physics material science technology and device applications of specialty polymers This comprehensive book containing 16 chapters is the result of the untiring efforts of 35 most renowned experts from the national and international scientific community This book is thought provoking to the researchers working in the fields of chemistry biochemistry biotechnology medicine polymer chemistry semiconductor physics material science electrochemistry biology electronics photonics material science solid state physics nanotechnology electrical and electronics engineering optical engineering device engineering data storage etc Specialty Polymers Ram K. Special Polymers for Electronics and Optoelectronics J.A. Chilton,M. Goosey,2012-12-06 Commercially successful fully synthetic polymeric materials were produced in the early years of this century the first example being Bakelite This was made from phenol and formaldehyde by Leo Bakeland in 1909 Before the end of the 1920s a large number of other synthetic polymers had been

created including polyvinyl chloride and urea formaldehyde Today there are literally hundreds of synthetic polymers commercially available with ranges of properties making them suitable for applications in many industrial sectors including the electrical and electronics industries In many instances the driving force behind the development of new materials actually came from the electronics industry and today s advanced electronics would be inconceivable without these materials For many years polymers have been widely used in all sectors of the electronics industry From the early days of the semiconductor industry to the current state of the art polymers have provided the enabling technologies that have fuelled the inexorable and rapid development of advanced electronic and optoelectronic devices
