Specification And Proof In Real Time Csp:

Theories And Experiences For Real-time System Development Charles Rattray, Teodor Rus, 1995-02-14 Our understanding of real time systems is rapidly approaching a level of maturity which calls for a consolidation of our present knowledge and experience Particularly effective in influencing our understanding has been the conjoining of universal algebra with the theory and practice of real time system development This interplay between algebraic methodology and software technology AMAST for real time systems is the theme for this text Each chapter derived from papers presented at the all invitation 1st AMAST International Workshop on Real Time Systems Iowa 1993 is written by leaders in their field The chapters form an intriguing mix of modeling specification verification and implementation of real real time systems They cover untimed and timed systems sequential concurrent and embedded real time processes integrated models using state machines temporal logic and algebraic data models real time CSP verification tools system design using temporal logic symbolic checking of discrete time models iterative symbolic approximation in timing verification and verification of audio protocols timed full LOTOS and timed LOTOS extensions LOTOS specification of telephone services and flight warning computers and performance analysis

IFM'99 Keijiro Araki, Andy Galloway, Kenji Taguchi, 2012-12-06 Formal methods have been established as the rigorous engineering methodology for the system development Applying formal methods to a large and complex system development often requires the modelling of different aspects of such a system For instance complex systems such as integrated avionics systems engine control software can involve functional and timing requirements that must be eventually implemented as executing code on a communicating distributed topology This book contains the papers presented at the First International Workshop on Integrated Formal Methods held at the University of York in June 1999 The conference provided a forum for the discussion of theoretical aspects of combining behavioural and state based formalisms and practical solutions to the industrial problems of this approach *FM'99 - Formal Methods*

Jeannette M. Wing, Jim Woodcock, Jim Davies, 2003-07-31 Formal methods are coming of age Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations A transfer of technology into the mainstream of systems development is slowly but surely taking place FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems These proceedings are a record of the technical symposium of FM 99 also side the papers describing applications of formal methods you will find technical reports papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia This session reflects an increasing openness within the international community of researchers and practitioners papers were submitted covering a wide variety of formal methods and application areas The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries The committee was divided into 19 tracks each with its own chair to oversee the reviewing process Our collective task was a difficult one there were 259 high quality submissions from 35 different countries
