Lane, R.W. Crosskey, 2012-12-06 Surprising though it seems the world faces almost as great a threat today from arthropod borne diseases as it did in the heady days of the 1950s when global eradication of such diseases by eliminating their vectors with synthetic insecticides particularly DDT seemed a real possibility Malaria for example still causes tremendous morbidity and mortality throughout the world especially in Africa Knowledge of the biology of insect and arachnid disease vectors is arguably more important now than it has ever been Biological research directed at the development of better methods of control becomes even more important in the light of the partial failure of many control schemes that are based on insecticide although not all is gloom since basic biological studies have contributed enormously to the outstanding success of international control programmes such as the vast Onchocerciasis Control Programme in West Africa It is a sine qua non for proper understanding of the epidemiology and successful vector control of any human disease transmitted by an arthropod that all concerned with the problem medical entomologist parasitologist field technician have a good basic understanding of the arthropod s biology Knowledge will be needed not only of its direct relationship to any parasite or pathogen that it transmits but also of its structure its life history and its behaviour in short its natural history Above all it will be necessary to be sure that it is correctly identified Current Catalog ,1988 First multi year cumulation

covers six years 1965 70 Vector Control Jan A. Rozendaal, 1997 The first comprehensive illustrated guide to vector control methods suitable for use by individuals and communities Published at a time when large scale control programs organized by governments are declining the manual aims to help non professionals understand the role of vectors in specific diseases and then select and use control methods that are appropriate effective affordable and safe Hundreds of simple inexpensive and often ingenious techniques developed and used in a host of different settings are presented and described in this abundantly illustrated guide The manual is intended to assist health workers at district and community level in aid organizations in refugee camps or in resource development projects who do not have direct access to experts in entomology yet need methods for controlling the vectors of such important diseases as malaria filariasis leishmaniasis schistosomiasis dengue and trypanosomiasis With this audience in mind the book combines non specialist factual information about vectors and the diseases they cause with practical advice on control measures whether involving the use of insecticides environmental modifications or the construction of simple devices from local materials Details range from a table showing where and when the different groups of biting Diptera are active to a recipe for preparing plaster to protect homes against triatomine bugs from step by step instructions for the construction of cheap insect traps to advice on how to impregnate bed nets and curtains with suitable insecticides The book opens with a brief description of recent changes in the approach to vector control followed by a discussion of factors that can influence the success of control measures undertaken by individuals and communities The core of the manual consists of eight chapters focused on each of the major vectors and groups of vectors mosquitos and other biting Diptera tsetse flies triatomine bugs bedbugs fleas lice ticks and mites cockroaches houseflies cyclops and freshwater snails Each chapter includes pertinent facts about the vector s life cycle behavior and favorite habitats the diseases it causes and their clinical features including opportunities for prevention treatment and control Against this background methods for control are presented in great detail Since the use of control measures is often constrained by lack of resources as well as lack of knowledge most methods described are simple and cheap do not require much training or supervision and are safe for both the user and the environment The remaining chapters offer guidance on the principles and practice of house spraying with residual insecticides and provide instructions for the safe use of pesticides and the emergency treatment of poisoning *Technical Report Series* ,2001 *Toxicological Profile for Dichlorvos* ,1997
