Handbook of Fourier Transform Raman and Infrared Spectra of Polymers A.H. Kuptsov, G.N. Zhizhin, 1998-10-29 A collection of infrared and Raman spectra of 500 natural and synthetic polymers of industrial importance is presented in this book A large variety of compounds are included starting with linear polyolefins and finishing with complex biopolymers and related compounds The spectra were registered using Infrared Fourier Transform Spectrometers in the laboratory of the All Russia Institute of Forensic Sciences The IR and Raman spectra are presented together on the same sheet The accompanying data

include general and structure formulae CAS register numbers and sample preparation conditions Features of this book
 Continues the long tradition of publishing specific and standard data of new chemical compounds For low molecular weight
 substances complementary IR and Raman spectra are featured on the same sample and printed on the same page This
 fingerprint data allows the substance of the sample to be identified without doubt An important feature of this unique
 collection of data is the increase in the identification precision of unknown substances Peak tables are available in digital
 ASCII format on a diskette delivered with the book This allows the user to search for unknowns All the spectra in the
 collection are base line corrected This book will be of interest to scientists involved in the synthesis of new polymeric
 materials polymer identification and quality control Libraries of scientific institutes research centers and universities
 involved in vibrational spectroscopy will also find this collection invaluable The Student's Lab Companion John W.
