Corporation and Reuter Stokes Electronic Components Company demonstrated lines of equipment for Mössbauer work. The usual high degree of interest in the well designed commercial instrumentation was evident. The highlight of the symposium was the session on lunar samples. Fortunately the timing of the symposium permitted it to provide one of the earliest exposures of the lunar results to the scientific community. Many papers on other applications were presented including work on frozen aqueous solutions. Four papers on methodology development made up one session including reports on a polarized source on a coincidence technique and on the use of radio frequency to perturb hyperfine levels. As usual many of the papers report work in fields remote from basic physics.

Amino Acids, Peptides and Proteins J S Davies, 2007-10-31 In an ever increasing domain of activity Amino Acids Peptides and Proteins provides an annual compilation of the world's research effort into this important area of biological chemistry. Volume 31 provides a review of literature published during 1998. Comprising a comprehensive review of significant developments at this biology chemistry interface each volume opens with an overview of amino acids and their applications. Work on peptides is reviewed over several chapters ranging from current trends in their synthesis and conformational and structural analysis to peptidomimetics and the discovery of peptide related molecules in nature. The application of advanced techniques in structural elucidation is incorporated into all chapters whilst periodic chapters on metal complexes of amino acids peptides and beta lactams extend the scope of coverage. Efficient searching of specialist topics is facilitated by the sub division of chapters into discrete subject areas allowing annual trends to be monitored. All researchers in the pharmaceutical and allied industries and at the biology chemistry interface in academia will find this an indispensable reference source.
