W. Frei,2012-12-06 With the second volume in this series we have continued the theme of Volume 1 and expanded more generally into separation and continuous flow techniques The first chapter gives an account on flow injection analysis This technique has gained considerable interest in the recent past and offers many facets of the use of chemistry in automated analysis procedures One of these facets is certainly also the use of ion pairing reactions and we have been fortunate to get two well known experts to treat this subject The use of ion pairing techniques is being discussed from a batch extraction sample handling point of view as well as for flow injection and chromatographic purposes Immobilized enzymes are another area of major attention and their multidirectional use in analytical chemistry is illuminated in Chapter 3 with special emphasis on their use in connection with liquid chromatography Needless to say similar techniques have also found their way into continuous flow methodology Auto Analyzers and many of the aspects discussed in Chapter 3 are adaptable to this end The need and recent urgency for separation of optical isomers in many areas particularly pharmaceutical and clinical analysis has spurred a flurry of activity in this special section of chromatography The current status of the field of optical isomer separation is competently reviewed in Chapter 4 Again this is a typical area wherein it is the proper use of chemistry that finally delivers a solution The last two chapters deal with precolumn or prechromatographic derivatization techniques *Silicon Carbide* Peter Friedrichs,Tsunenobu Kimoto,Lothar Ley,Gerhard Pensl,2011-04-08 This book prestigiously covers our current understanding of SiC as a semiconductor material in electronics Its physical properties make it more promising for high powered devices than silicon The volume is devoted to the material and covers methods of epitaxial and bulk growth Identification and characterization of defects is discussed in detail The contributions help the reader to develop a deeper understanding of defects by combining theoretical and experimental approaches Apart from applications in power electronics sensors and NEMS SiC has recently gained new interest as a substrate material for the manufacture of controlled graphene SiC and graphene research is oriented towards end markets and has high impact on areas of rapidly growing interest like electric vehicles The list of contributors reads like a Who's Who of the SiC community strongly benefiting from collaborations between research institutions and enterprises
