[The Crosslinguistic Study of Language Acquisition](#)

Dan Isaac Slobin, 1985 **Handbook of Applied Psycholinguistics** S. Rosenberg, 2014-02-04 First published in 1982 The chapters of this handbook contain critical integrative reviews of research and theory in the major areas of the field of applied psycholinguistics the field in which applied problems of language and communicative functioning and development are

approached from the standpoint of basic research and theory in psycholinguistics and related areas of cognitive psychology. The book was designed to meet the needs of researchers, practitioners and graduate students from such disciplines as education including special education, language learning, linguistics, neurology, psychiatry, psychology and speech and hearing. For such reviews, although the state of research in an area and a desire to stress research and theory in substantive areas resulted in a decision not to include chapters on the measurement of linguistic maturity, language intervention, the language of the learning disabled child, language and environmental deprivation, language and mania, language and senile dementia and the design of written and oral information and computer command language.

Assessment of Young Developmentally Disabled Children Theodore D. Wachs, Robert Sheehan, 2013-06-29. Our knowledge of the cognitive and social emotional functioning of developmentally disabled infants and preschoolers derives in large part from our assessment of such children. This book has been developed to familiarize readers with the characteristics of developmentally disabled children and to introduce to readers aspects of measurement that are of relevance to the assessment of atypical infants and preschoolers. The book has been developed with clinicians and prospective clinicians in mind. These are individuals who are committed to the care and education of developmentally disabled infants and preschoolers and the families of those children. The book has thus been written to provide support for the use of assessment data in planning early intervention programs. Of special note in the development of this edited book is that it is divided into four major parts with interrelated chapters in each part. The authors of chapters in Parts II and III had access to the chapters in Part I before writing their chapters. The summary chapters found in Part IV were similarly written by authors having access to all chapters in Parts I-III. This approach to the development of an edited book was chosen as a way of ensuring an integration of major concepts throughout the book. This process is also a reflection of our belief that assessment is an interdisciplinary process involving the synthesis of a number of diverse interests.
