Scattered across this background are numerous small, white, cube-shaped blocks, each with a single letter of the alphabet printed on it in various colors (red, blue, yellow, green, pink). The blocks are arranged in a way that they appear to be floating or scattered around the central text. A semi-transparent white rectangular box is centered on the slide, containing the title text.

This book extends models of early literacy analyzing how children's reading and spelling skills develop throughout their school career An account of how a child's reading and spelling develop which goes beyond the early years Shows that there are radical changes in the way children read and spell as they get older Describes a new theory about the learning that goes on in the later stages of reading and spelling Makes clear the educational implications of this theory The authors research has previously contributed to the literacy hour a government initiative to improve the teaching of literacy skills in UK schools

Spelling Rebecca Treiman, 2013-06-29 are the findings that Wade Woolley and Siegel obtained when they studied children for whom English was a second language Although the second language speakers performed more poorly than the native speakers on tests of syntactic knowledge phoneme deletion and pseudoword repetition the second language speakers were not worse than the native speakers in spelling These results suggest that even if children have not fully mastered the sound system of their second language they need not be disadvantaged in spelling it The findings appear to pose a challenge to views of reading and spelling that place primary emphasis on phonology The Muter and Snowling study together with the Nunes Bryant and Bindman study broadens the focus by examining aspects of spelling beyond phonology Muter and Snowling in their longitudinal study of British school children examined the degree to which various linguistic skills measured between the ages of 4 and 6 predicted spelling ability at age 9 The results support the idea that phonological skill plays an important role in spelling development and further suggest that awareness of phonemes is more strongly related to spelling ability than awareness of rimes In addition grammatical awareness appears to predict spelling skill Children who are able to reflect on meaning relationships among words may be in a position to understand how this information is represented in English spelling
