*Sustainable Innovations in the Textile Industry* addresses advances taking place at every stage of the textile supply chain leading to improvements in sustainability and resource efficiency. There is a significant emphasis on respect for the environment in current thinking around textiles which contrasts with the impression many have of the industry due to its impact on global pollution over the past century. A key strength of the book is its comprehensive coverage of the complete textile process sequence including fibre to textile manufacture dyeing printing finishing and effluent discharge. This holistic approach is required to effectively address the sustainability issue which requires action across the supply chain. In addition it also provides the latest industry knowledge on technological advances in knitting non wovens speciality chemicals coating printing finishing and other methods that increase sustainability. Including historical aspects of sustainability in textiles as well as the state of the art in innovative sustainable fibers and manufacturing processes this book is essential reading for anyone interested in sustainable directions in the textile industry. Emphasizes innovative production technologies the biotransformation of the textile industry the circular economy recycling and the green future of textiles. Addresses sustainability in business and logistics explaining how these functions influence the environmental impact of other stages of the value chain. Provides a guide to the eco labels and assessment methods used by industry.
