Textures Peace And Security Series 4:

Fundamental and Applied Nano-Electromagnetics Antonio Maffucci, Sergey A. Maksimenko, 2016-04-08 This book presents the most relevant and recent results in the study of Nanoelectromagnetics a recently born fascinating research discipline whose popularity is fast arising with the intensive penetration of nanotechnology in the world of electronics applications Studying nanoelectromagnetics means describing the interaction between electromagnetic radiation and quantum mechanical low dimensional systems this requires a full interdisciplinary approach the reason why this book hosts contributions from the fields of fundamental and applied electromagnetics of chemistry and technology of nanostructures and nanocomposites of physics of nano structures systems etc The book is aimed at providing the reader with the state of the art in Nanoelectromagnetics from theoretical modelling to experimental characterization from design to synthesis from DC to microwave and terahertz applications from the study of fundamental material properties to the analysis of complex systems and devices from commercial thin film coatings to metamaterials to circuit components and nanodevices The book is intended as a reference in advanced courses for graduate students and as a guide for researchers and industrial professionals involved in nanoelectronics and nanophotonics applications

Functional Nanostructures and Sensors for CBRN Defence and Environmental Safety and Security Anatolie Sidorenko, Horst Hahn, 2020-03-17 Over the last decade techniques for materials preparation and processing at nanometer scale have advanced rapidly leading to the introduction of novel principles for a new generation of sensors and detectors At the same time the chemical industry transport and agriculture produce huge amounts of dangerous waste gases and liquids leading to soil air and water contamination One more modern threat international terrorism demands that scientists make efforts to apply new principles and technologies to protect society against chemical biological radiological and nuclear CBRN attacks and to develop novel effective technologies for the remediation of large contaminated areas Accordingly the main goal of this book is to bring together experts theorists experimentalists engineers and technologists for an extensive discussion covering novel principles for functional nanostructures and detector fabrication and implementation the development of novel technologies for the deactivation of CBRN agents their experimental realization and their application in novel monitoring and control systems and technological processes for soil and water remediation with a view to environmental protection and defence against CBRN based terrorism In keeping with the book s main goal the following topics are highlighted and discussed Sensors and detectors detection of chemicals principles of artificial nose and chemical micro lab on a chip design surface and underground water quality monitoring systems molecular electronics superconducting electronic devices quantum detectors and Qubits Environmental protection and CBRN detection of infrared microwave X ray and terahertz radiation Principles for novel IR UV and Terahertz wave devices for the detection of low contrast objects Novel technological processes for CBRN destruction and deactivation All these topics are strongly interrelated both with regard to fundamental aspects and to fabrication and implementation

technologies in addition they are highly promising for application in novel functional devices computer logics sensing and detection of low concentration chemicals weak and extremely weak magnetic and microwave fields infrared and ultraviolet radiation Given its scope the book will be a useful and interesting guide for a broad readership of engineers scientists PhD students and experts in the area of defence against environmental terrorism *Remote Sensing* Boris Escalante,2012-06-13 This dual conception of remote sensing brought us to the idea of preparing two different books in addition to the first book which displays recent advances in remote sensing applications this book is devoted to new techniques for data processing sensors and platforms We do not intend this book to cover all aspects of remote sensing techniques and platforms since it would be an impossible task for a single volume Instead we have collected a number of high quality original and representative contributions in those areas **Degradation Assessment and Failure Prevention of Pipeline Systems** Gabriella Bolzon,Giovanna Gabetta,Hryhorii Nykyforchyn,2020-09-10 This book presents the results of the research project G5055 Development of novel methods for the prevention of pipeline failures with security implications carried out in the framework of the NATO Science for Peace and Security program and explores the lifecycle assessment of gas infrastructures Throughout their service lives pipelines transporting hydrocarbons are exposed to demanding working conditions and aggressive media In long term service material aging increases the risk of damage and failure which can be accompanied by significant economic losses and severe environmental consequences This book presents a selection of complementary contributions written by experts operating in the wider fields of pipeline integrity taken together they offer a comprehensive portrait of the latest developments in this technological area Uniting Electron Crystallography and Powder Diffraction Ute Kolb,Kenneth Shankland,Louisa Meshi,Anatoly Avilov,William I.F David,2012-12-20 The polycrystalline and nanocrystalline states play an increasingly important role in exploiting the properties of materials encompassing applications as diverse as pharmaceuticals catalysts solar cells and energy storage A knowledge of the three dimensional atomic and molecular structure of materials is essential for understanding and controlling their properties yet traditional single crystal X ray diffraction methods lose their power when only polycrystalline and nanocrystalline samples are available It is here that powder diffraction and single crystal electron diffraction techniques take over substantially extending the range of applicability of the crystallographic principles of structure determination This volume a collection of teaching contributions presented at the Crystallographic Course in Erice in 2011 clearly describes the fundamentals and the state of the art of powder diffraction and electron diffraction methods in materials characterisation encompassing a diverse range of disciplines and materials stretching from archeometry to zeolites As such it is a comprehensive and valuable resource for those wishing to gain an understanding of the broad applicability of these two rapidly developing fields Atomic Pair Distribution Function Analysis S. J. L. Billinge,Simon Billinge,Kirsten M. Ø Jensen,Kirsten Jensen,2023 This book presents hands on worked problems and solutions for modelling the structure of nanomaterials and disorder in crystals It supplies atomic pair

distribution function PDF data and takes the reader step by step through the process of analysing the data to understand details of the local atomic or magnetic structure It has worked examples using the programs PDFgui and diffpy cmi The chapters progress systematically from simple to more complicated examples allowing the reader to build confidence and independence The book covers tips and tricks for obtaining good PDFs from raw x ray and electron diffraction data It goes through the process of getting started with the PDFgui and diffpy cmi programs It then takes real examples from the published literature and shows how scientific questions were answered by the modelling The scientific examples covered include fitting local structure of complex crystals fitting multi phase samples r dependent fitting to explore local symmetry breaking understanding structural phase transitions by modelling temperature dependent datasets modelling nanoparticle structures using attenuated average structure models and discrete cluster models modelling data from polycrystalline thin film samples intercalated metal organic framework compounds and carrying out a magnetic PDF structure refinement

Vitale,2012-02-09 This book covers important aspects of the field of food security and safety ranging from fundamental production through advanced water treatment technologies and detection of novel pollutants to management and policy making The discussion strives to develop an integrated approach to solving the associated problems by simultaneously considering sociological ecological and economic aspects Special focus is on the environmental management systems that should be integrated in the processes of environmental risk assessment Also addressed are other technologies applied in the service of detecting preventing and monitoring possible threats to food security and safety With its variety of subjects this volume can serve both as a textbook for advanced studies and as a useful reference source for professionals *East Asian and Pacific Series* ,1967 **Petrichor** Pasquale De Marco,2025-08-08 Petrichor is a journey through the fascinating world of the senses In this book Pasquale De Marco explores the science behind our senses and how they work together to create

our perception of the world Pasquale De Marco also explores the role of the senses in our lives from the way they influence our emotions and behavior to the way they shape our culture and society Our senses are portals to a world of wonder and experience They allow us to perceive and interact with our surroundings shaping our thoughts emotions and actions From the moment we are born our senses are constantly bombarded with a stream of information which we use to make sense of our world The sense of smell for example can evoke powerful memories and emotions The scent of freshly baked bread can transport us back to our childhood while the smell of blooming flowers can fill us with joy and tranquility The sense of hearing can also have a profound impact on us The sound of music can soothe our souls while the sound of laughter can fill us with happiness The sense of sight is perhaps our most dominant sense allowing us to perceive the world around us in all its vibrant glory The colors we see can influence our mood and behavior while the shapes and textures we perceive can evoke a sense of wonder and awe The sense of taste is another important sense allowing us to experience the flavors of the world around us From the sweetness of ripe fruit to the bitterness of dark chocolate taste can bring us immense pleasure and satisfaction The sense of touch is often overlooked but it is just as important as the other senses Touch allows us to interact with the physical world around us and it plays a vital role in our development and well being The warmth of a hug can comfort us while the feel of a soft breeze can refresh us Our senses are interconnected and interdependent They work together to create a rich and multisensory experience of the world around us By understanding and appreciating the power of our senses we can enhance our lives and well being In Petrichor you will learn about The science behind our senses and how they work together to create our perception of the world The role of the senses in our emotions and behavior The role of the senses in our culture and society How to use your senses to live a more fulfilling life If you like this book write a review

The Texture of American Political Discourse Paul Wakefield Soper,1999 **Texturing Difference** Maurits van Bever Donker,2024-12-03 This book situates the nuanced intervention of the Black Consciousness Movement in South Africa within the international conjuncture of anti colonial thought and decolonization It argues that the Black Consciousness Movement in addition to its urgent political focus should also be read as a philosophical intervention on the problem of Man that haunts the idea of race As Steve Biko once famously said apartheid will end the real question is what comes after apartheid Maurits van Bever Donker argues that the Black Consciousness Movement found intellectual and conceptual allies in the writings of Frantz Fanon and Aimé Césaire tracing the problem of race as foundational to what is called the script of Man and in the process inventing the possibility of a new sense of Man one with a more human face While the work of figures like Biko Fanon and Césaire tends to be read as discrete political texts in a broader field of negritude and radical black thought Texturing Difference explores what becomes possible when this network of texts is read from the perspective of South Africa This intervention has significance not only for how race is approached and understood in South Africa but for the global workings of race in our time **The Authority of the Security Council under Chapter VII of the UN Charter**

David Schweigman,2001-05-01 This volume discusses the legal limits to the authority of the Security Council under Chapter VII of the United Nations Charter The interest in this topic regained importance when the Security Council started to play an increasingly active role after a period of dormancy between 1945 and 1990 The work describes various approaches to Charter interpretation provides an overview of the Council s powers under the Charter and surveys the Council s recent practice with regard to the maintenance of international peace and security Subsequently the sources and contents of the limits to the Council s authority are analyzed This is followed by an analysis of the role of the International Court of Justice which includes an overview of the main obstacles to and possibilities of judicial review by the Court of Council decisions taken under Chapter VII Finally the work discusses recent proposals to enhance the Council s legitimacy **Clean**
