**Equatorial Africa** David Morgan,2007 From the website One of the fiercest dangers to great apes is the destruction of their  
forest habitat by commercial logging operations This threat was highlighted in May 2005 at an expert workshop held in  
Brazzaville Republic of Congo In response Drs David Morgan and Crickette Sanz have developed a new set of best practices  
guidelines for Western Equatorial Africa to help blunt the worst effects of tropical logging on the surviving great apes in the  
region Targeted at forestry managers and partners working in forestry concessions these guidelines present practical

straightforward recommendations to help reduce the impact of logging on great apes including cost benefit analyses and the expected long term consequences for great apes in the region If these guidelines are upheld by professionals working in tropical forestry they will contribute greatly to the survival of great apes in the region and will serve as a blueprint for developing site specific management plans Fun and Educational Places to Go with Kids and Adults in Southern California - 6th Edition Susan Peterson,2003-07 *Trophic Ecology* Torrance C. Hanley,Kimberly J. La Pierre,2015-05-07 As researchers try to predict the effects of human modification at all trophic levels and mediate the impact of rapid environmental change it has become clear it is no longer a matter of agreeing that both bottom up and top down forces play important roles in diverse ecosystems Rather the question is how do these forces interact across aquatic and terrestrial systems Written by leading experts in the field this book presents a unique synthesis of trophic relationships within and across ecosystems that is a valuable foundation for the development of cross system multidisciplinary research It also provides new insights into population biology and community ecology and examines the interactive effects of bottom up and top down forces on biodiversity at each trophic level A one stop resource for learning about bottom up and top down interactions this book encourages discussion and collaboration among researchers to identify similarities and differences in trophic interactions across aquatic and terrestrial systems **The Garden** ,1996 **General Technical Report PSW.** ,1978 **Primate Research and Conservation in the Anthropocene** Alison M. Behie,Julie A. Teichroeb,Nicholas Malone,2019-01-31 This book takes a new approach to understanding primate conservation research adding a personal perspective to allow readers to learn what motivates those doing conservation work When entering the field over a decade ago many young primatologists were driven by evolutionary questions centered in behavioural ecology However given the current environment of cascading extinctions and increasing threats to primates we now need to ensure that primates remain in viable populations in the wild before we can simply engage in research in the context of pure behavioural ecology This has changed the primary research aims of many primatologists and shifted our focus to conservation priorities such as understanding the impacts of human activity habitat conversion or climate change on primates This book presents personal narratives alongside empirical research results and discussions of strategies used to stem the tide of extinction It is a must have for anyone interested in conservation research
