Microbial Bioremediation and Multiomics Technologies for Sustainable Development Fuad Ameen, Sartaj Ahmad Bhat, Vineet Kumar, 2024-08-02 The steadily increasing presence of both natural and anthropogenic pollutants in our environment poses a considerable challenge given the recalcitrance of many of these pollutants Microbial bioremediation presents a promising and sustainable strategy that harnesses a diverse array of microorganisms operating either concurrently or sequentially to eliminate or mitigate the presence of pollutants within the environment Recent years have witnessed the application of multiomics techniques to the study of biodegradation and bioremediation yielding an abundance of novel data that enrich our comprehension of pivotal pathways and offer fresh perspectives on the adaptability of organisms amidst shifting environmental conditions This book brings together recent progress in microbial bioremediation emphasizing the emerging field of multiomics technologies It serves as a valuable reference for microbiologists exploring multiomics applications and environmental scientists seeking innovative remediation solutions *Cloning* Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology

labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

The Maltese Messiah John D. Loscher,2021-11-30 Upon discovering the Maltese Order possesses the Holy Grail God will be revealed to Cardinal Archbishop Conor O Griffin Papal Nuncio to the Knights of Malta in

a laboratory of science and technology specializing in genetic engineering Learning how the cup used to celebrate the first communion ultimately served as a receptacle for the blood of Jesus of Nazareth the Vatican ambassador witnesses DNA extraction Via cloning the Second Coming of Christ is at hand For Cardinal Archbishop O Griffin this scientific achievement creates a moral dilemma yes the use of technology in order to create life makes science not God the creator but with all of man s genius can science also successfully replicate Jesus of Nazareth s spirit Is spirit part of human DNA or is it something else Seeking answers for these questions compels the Holy See s diplomat to answer a far more basic question How will he answer to God
