**The Accidental Possibilities of the City** Katherine Smith, 2021-03-02 Claes Oldenburg's commitment to familiar objects has shaped accounts of his career but his associations with Pop art and postwar consumerism have overshadowed another crucial aspect of his work In this revealing reassessment Katherine Smith traces Oldenburg's profound responses to shifting urban conditions framing his enduring relationship with the city as a critical perspective and conceiving his art as urban theory Smith argues that Oldenburg adapted lessons of context gleaned from New York's changing cityscape in the late 1950s to large scale objects and architectural plans By examining disparate projects from New York to Los Angeles she situates Oldenburg's innovations in local geographies and national debates In doing so Smith illuminates patterns of urbanization through the important contributions of one of the leading artists in the United States

Bauhaus Goes West: Modern Art and Design in Britain and America Alan Powers, 2019-08-20 An exploration of the Bauhaus school and its legacy in the context of the modernist period including its wider influence on art design and education Bauhaus Goes West is the story of cultural and artistic exchange between Germany and the West over a period of seventy years It presents a view of the influential Bauhaus school in relation to the wider modernist period distinguishing between the received idea of the Bauhaus and the documented reality Initially the Bauhaus was seen as an educational experiment only later was it recognized as a style and a movement Working from meticulous research Alan Powers reexamines speculations about the reception and understanding of individuals connected with the Bauhaus school and what they ultimately achieved Looking in greater detail at the theory and practice of art design and architecture between the arts and crafts movement and modernism this book challenges the assumption that the 1920s represented a void of reactionary conservatism Bauhaus Goes West offers an opportunity to recover some of the overlooked aspects of avant garde that ran parallel with the work of the Bauhaus such as the film making of Francis Bruguière and Len Lye and the development of art instruction for children under Marion Richardson and the London County Council

**Alloys** Marin R. Sullivan, 2022-03-22 A new look at the interrelationship of architecture and sculpture during one of the richest periods of American modern design Alloys looks at a unique period of synergy and exchange in the postwar United States when sculpture profoundly shaped architecture and vice versa Leading architects such as Gordon Bunshaft and Eero Saarinen turned to sculptors including Harry Bertoia Alexander Calder Richard Lippold and Isamu Noguchi to produce site determined large scale sculptures tailored for their buildings highly visible and well traversed threshold spaces The parameters of these spaces atriums lobbies plazas and entryways led to various designs like sculptural walls ceilings and screens that not only embraced new industrial materials and processes but also demonstrated art's ability to merge with lived architectural spaces Marin Sullivan argues

that these sculptural commissions represent an alternate history of midcentury American art Rather than singular masterworks by lone geniuses some of the era s most notable spaces Philip Johnson s Four Seasons Restaurant in Mies van der Rohe s Seagram Building Max Abramovitz s Philharmonic Hall at Lincoln Center and Pietro Belluschi and Walter Gropius s Pan Am Building would be diminished without the collaborative efforts of architects and artists At the same time the artistic creations within these spaces could not exist anywhere else Sullivan shows that the principle of synergy provides an ideal framework to assess this pronounced relationship between sculpture and architecture She also explores the afterlives of these postwar commissions in the decades since their construction A fresh consideration of sculpture s relationship to architectural design and functionality following World War II Alloys highlights the affinities between the two fields and the ways their connections remain with us today Walter Gropius Carsten Krohn,2019-06-17 As founder of the Bauhaus school Walter Gropius 1883 1969 is one of the icons of 20th century architecture While his early buildings in Pomerania were still strongly marked by his teacher Peter Behrens after an expressionistic phase focused on handicraft he ultimately arrived at geometric abstraction During the entire period he collaborated with other architects founding the collective known as The Architects Collaborative in the US The comprehensive monograph documents all 74 of the known buildings by Gropius that were realized including many early works which he never publicized but it also critically examines his unbuilt projects The book is illustrated with new photographs by the author historical figures and with as new plans drawn by the author

Lopez,2012-05-04 This historical study looks at how reformers have used urban planning and architecture to improve the health of urban residents of the United States It begins in the nineteenth century when problems in rapidly urbanizing cities threatened to overwhelm cities and then traces the development and impact of reform movements up through the First World War including discussions of model tenements the city beautiful movement tenement laws and zoning and building codes Midcentury design movements such as new efforts to plan suburbs and Modernism along with outlines of the impacts of public housing highway building and urban renewal are the focus of the middle chapters of the book The final third examines the revival of cities and the reconnection of public health with urban planning that occurred as the twentieth century ended
