The Path Of The Pole:

The Path of the Pole Charles H. Hapgood, 1999 Hapgood's tour de force is back in print This riveting account of how earth's poles have flipped positions many times is the culmination of Hapgood's extensive research of Antarctica ancient maps and the geological record This amazing book discusses the various pole shifts in earth's history occurring when earth's crust slips in the inner core and gives evidence for each one It also predicts future pole shifts a planetary alignment will cause the next one on 5 May 2000 Packed with illustrations this book is the reference other books on the subject cite over and over again With millennium madness in full swing this is just the book to generate even more excitement at the unknown possibilities

The Light of the World Joseph ibn Nahmias, 2016-03-01 This book contains an edition with an extensive introduction translation and commentary of *The Light of the World* a text on theoretical astronomy by Joseph Ibn Nahmias composed in Judeo Arabic around 1400 C E in the Iberian Peninsula As the only text on theoretical astronomy written by a Jew in any variety of Arabic this work is evidence for a continuing relationship between Jewish and Islamic thought in the late fourteenth and early fifteenth centuries The text's most lasting effect may have been exerted via its passage to Renaissance Italy where it influenced scholars at the University of Padua in the early sixteenth century With its crucial role in the development of European astronomy as well as the physical sciences under Islam and in Jewish culture *The Light of the World* is an important episode in Islamic intellectual history Jewish civilization and the history of astronomy

The Electrical Journal, 1910 [The Cognition of Sequences](#) Snehlata Jaswal, 2018-01-24 It is impossible to perceive the innumerable stimuli impinging on our senses all at once Out of the myriad stimuli external and internal a few are selected for further processing and even among these we try to put each in some sort of relation with the others to be able to make some sense about them all Time of course is an elementary dimension we use to organize our experiences Thus the perception of sequences is basic to human cognition Nevertheless research addressing sequences is rather sparse Partly this is due to difficulty in designing experiments in this area due to huge individual differences Then there is the assumption that temporal order has more to do with memory than perception Another problem is that sequences seem endemic to the auditory world So much so that some researchers have suggested that sound provides the auditory scaffolding for sequencing behavior Little wonder that research studies addressing sequences in modalities other than audition are extremely rare This research topic aimed to gather a holistic picture of sequencing behaviour among humans by collecting

snapshots of the current research on the topic of sequencing We particularly sought contributions which addressed sequences beyond the auditory modality The single unifying criteria for these diverse contributions was that they shed new light on previously unexplored empirical relationships and or provoked new lines of research with incisive ideas regarding sequencing behavior Seasoned researchers contributed their views on perception memory and production of sequences
