Opening Pandora's Box G. Nigel Gilbert,Michael Mulkey,1984-02-23 This book proposes a fresh approach to sociological analysis and in particular to the analysis of scientific culture It moves away from previous studies which have tended to focus on scientists actions and beliefs to show that analysis of scientific discourse can be productive and revealing The book demonstrates that scientists produce varying accounts of their actions and beliefs in different social situations Rather than attempting to extract one coherent interpretation from these diverse accounts the study identifies two basic scientific repertoires and shows how scientists use them to create their discourse This provides a point of departure for more complex analytical topics Discourse analysis is applied to show how different degrees of consensus can be ascribed to the same group of scientists at a given moment in time through the application of standard interpretive techniques Finally discourse analysis is used to explore scientists humour a neglected topic that is shown to provide important insights into the normally hidden interpretive regularities which underlie the cultural diversity of science *Biopsychosocial Factors in*

Receptions on Screen Ricardo Apostol,Anastasia Bakogianni,2018-10-19 This volume explores film and television sources in problematic conversation with classical antiquity to better understand the nature of artistic reception and classical reception in particular Drawing inspiration from well theorized fields like adaptation studies comparative literature and film the essays in this collection raise questions fundamental to the future of reception studies The first section Beyond Fidelity deals with idiosyncratic adaptations of ancient sources the second section Beyond Influence discusses modern works purporting to adapt ancient figures or themes that are less straightforwardly ancient than they may at first appear while the last section Beyond Original uses films that lack even these murky connections to antiquity to challenge the notion that studying

reception requires establishing historical connections between works As questions of audience interpretation and subjectivity are central to most contemporary fields of study this is a collection that is of interest to a wide variety of readers in the humanities

On Folk Epistemology Mikkel Gerken, 2017-09-15 On Folk Epistemology explores how we ascribe knowledge to ourselves and others Empirical evidence suggests that we do so early and often in thought as well as in talk Since knowledge ascriptions are central to how we navigate social life it is important to understand our basis for making them A central claim of the book is that factors that have nothing to do with knowledge may lead to systematic mistakes in everyday ascriptions of knowledge These mistakes are explained by an empirically informed account of how ordinary knowledge ascriptions are the product of cognitive heuristics that are associated with biases In developing this account Mikkel Gerken presents work in cognitive psychology and pragmatics while also contributing to epistemology For example Gerken develops positive epistemic norms of action and assertion and moreover critically assesses contextualism knowledge first methodology pragmatic encroachment theories and more Many of these approaches are argued to overestimate the epistemological significance of folk epistemology In contrast this volume develops an equilibristic methodology according to which intuitive judgments about knowledge cannot straightforwardly play a role as data for epistemological theorizing Rather critical epistemological theorizing is required to interpret empirical findings Consequently On Folk Epistemology helps to lay the foundation for an emerging sub field that intersects philosophy and the cognitive sciences The empirical study of folk epistemology

Pandora's Risk Kent Osband, 2011 Author of the acclaimed work *Iceberg Risk An Adventure in Portfolio Theory* Kent Osband argues that uncertainty is central rather than marginal to finance Markets don't trade mainly on changes in risk They trade on changes in beliefs about risk and in the process markets unite stretch and occasionally defy beliefs Recognizing this truth would make a world of difference in investing Belittling uncertainty has created a rift between financial theory and practice and within finance theory itself misguiding regulation and stoking huge financial imbalances Sparking a revolution in the mindset of the investment professional Osband recasts the market as a learning machine rather than a knowledge machine The market continually errs corrects itself and makes new errors Respecting that process without idolizing it will promote wiser investment trading and regulation With uncertainty embedded at its core Osband's rational approach points to a finance theory worthy of twenty first century investing
