MITIGATING CLIMATE CHANGE: THE POWER OF "WE THE PEOPLE" Adeniyi A. Afonja, Climate change is real and there are many natural processes that have caused severe changes over millions of years Fertile land has transformed into deserts some dry lands today were at one time under water and many places covered by water currently were dry lands We the People are not the cause of climate change but many of our activities are compromising the natural control processes of the Human Environment Systems energy production and use agriculture and land use deforestation prolific lifestyles that leave large carbon footprints The pressure is on governments worldwide to mitigate climate change but We the People hold the ace we use most of energy and consume most of the products of agriculture and our excesses are fueling demand for even more energy we fund the energy companies through our stocks and share investments and can moderate their excesses we elect the politicians and can influence their policies and through mass actions we have surmounted governments in many places or forced changes in policies we have the formidable weapon of the social media to effect change without stepping out The Climate Change Mitigation Movement is already in motion but We the People also need to moderate our choices and lifestyles in order to move the world to carbon neutrality which is a prerequisite for a sustainable environment

of Justice delivered an Advisory Opinion on the legality of the use of nuclear weapons in which the Court stated that while the existing international law relating to the protection and safeguarding of the environment does not specifically prohibit the use of nuclear weapons it indicates important environmental factors that are properly to be taken into account in the context of the implementation of the principles and rules of the law applicable in armed conflict The present work analyses this conclusion focusing on the question whether or not the use of nuclear weapons during international armed conflict would violate existing norms of public international law relating to the protection and safeguarding of the environment Although the use of weaponry during armed conflict is usually related to the protection of individuals the rapidly emerging appreciation of and the worldwide realization of the intrinsic value of the natural environment as an indispensable asset for the continuation of life including human life on this planet both for present and future generations warrants a thorough and extensive examination of the question of the illegality of the employment of nuclear weapons from the point of view of international environmental protection law The book consists of two parts Part I discusses the historical development and the effects of nuclear weapons Part II discusses the protection of the environment during international armed conflict under *ius in bello* *ius ad bellum* and *ius pacis* Only then is it possible to assess the legality of the use of nuclear weapons under this particular set of rules

Human Well-Being and the Natural Environment Partha Dasgupta, 2001-11-15 In *Human Well Being and the Natural Environment* Partha Dasgupta explores ways to measure the quality of life Although the problem pervades a number of academic disciplines it is not confined to the academic realm International organizations regularly publish cross country estimates of the quality of life journalists and commentators publicize them and national governments are obliged to take note of them Today quality of life indices broker political arguments and together form a coin that even helps purchase economic and social policy It is therefore ironic that indices of human well being in current use are notably insensitive to our dependence on the natural environment both at a moment in time and across generations Moreover international discussions on economic development in poor regions all too frequently ignore the natural resource base In developing quality of life measures Professor Dasgupta pays particular attention to the natural environment illustrating how it can be incorporated more generally into economic reasoning in a seamless manner The result is a treatise that goes beyond quality of life measures and offers a comprehensive account of the newly emergent

subject of ecological economics The connections between biodiversity ecosystem services resource scarcities and economic possibilities for the future are developed in a quantitative but accessible language Such familiar terms as sustainable development social discount rates and Earth's carrying capacity are given a firm theoretical underpinning The theory that is developed is then put to use in extended commentaries on the economics of population poverty traps global warming structural adjustment programmes and free trade The author shows that whether we are interested in valuing the state of affairs in a country or in evaluating economic policy there the index that should be used is the economy's wealth which is the social worth of its capital assets The concept of wealth adopted here is a comprehensive one including not only manufactured assets but also human capital knowledge and the natural environment Wealth is contrasted with such popular measures of human well being as gross national product and the United Nations Development Programme's Human Development Index Although the theory developed here is not restricted in its applicability to the circumstances facing poor countries the exposition is prompted by the author's concerns over the dilemmas facing poor people in those parts of world Repeatedly he applies the theory to data on poor countries The picture that emerges is a sobering one and contrasts sharply with that portrayed in the contemporary literature on economic development The book has been written not only for fellow economists but also for students of economics environmental studies political science and political philosophy It is intended even more broadly for the general citizen interested in human well being and the centrality of the natural environment to our everyday lives

Environmental Archaeology: Meaning and Purpose Umberto Albarella, 2013-04-17 Despite the fact that the human life of the past cannot be understood without taking into account its ecological relationships environmental studies are often marginalised in archaeology This is the first book that by discussing the meaning and purpose we give to the expression environmental archaeology investigates the reasons for such a problem This is achieved through the use of theoretical considerations and the aid of a number of case studies which by taking us from Anglo Saxon England to pre Columbian Venezuela and from Classical Greece to late Antique Egypt emphasise the potential of an integrated approach The book is written by archaeologists with different backgrounds and is addressed to all researchers who care about the past relationship between people and the rest of Nature Despite the complexity of some of the issues tackled the book is written in an accessible manner and should be of interest to all students who want to understand the essence of archaeology beyond the boundary of the individual sub disciplines
