**Competition** P.A. Keddy, 2012-12-06 Competition is one of the most important factors controlling the distribution and abundance of living creatures Sperm cells racing up reproductive tracts beetle larvae battling inside single seeds birds defending territories and trees interfering with the light available to neighbours are all engaged in competition for limited resources Along with predation and mutualism competition is one of the three major biological forces that assemble living communities Recent experimental work much of it only from the last few decades has enhanced human knowledge of the prevalence of competition in nature There are acacia trees that use ants to damage vines beetles that compete in arenas for access to dung balls tadpoles that apparently poison their neighbours birds that smash the eggs of potential competitors and plants that associate with fungi in order to increase access to soil resources While intended as an up to date reference work on the state of this branch of ecology the many non technical examples will make interesting reading for those with a general interest in nature Greatly expanded from the first prize winning edition there are entirely new chapters including one on resources and another on competition gradients in nature The author freely ranges across all major taxonomic groups in search of evidence The question of whether competition occurs is no longer useful the author maintains rather the challenge is to determine when and where each kind of competition is important in natural systems For this reason variants of competition such as intensity asymmetry and hierarchies are singled out for particular attention The book concludes with the difficulties of finding general principles in complex ecological communities and illustrates the limitations on knowledge that arise out of the biased conduct of scientists themselves Competition can be found elsewhere in living systems other than ecological communities at sub microscopic scales in the interactions of enzymes and neural pathways and over large geographic areas in the spread of human populations and contrasting ideas about the world Human societies are therefore also examined for evidence of the kinds of competition found among other living organisms Using an array of historical examples including Biblical conflicts the use of noblemen's sons in the Crusades the Viking raids in Europe strategic bombing campaigns in the Second World War and ethnic battles of the Balkans the book illustrates how most of the aspects of competition illustrated with plants and animals

can be extended to the interactions of human beings and their societies      Promises and Limits of Reductionism in the Biomedical Sciences Marc H. V. Van Regenmortel, David L. Hull, 2002-08-02 Reductionism as a scientific methodology has been extraordinarily successful in biology However recent developments in molecular biology have shown that reductionism is seriously inadequate in dealing with the mind boggling complexity of integrated biological systems This title presents an appropriate balance between science and philosophy and covers traditional philosophical treatments of reductionism as well as the benefits and shortcomings of reductionism in particular areas of science Discussing the issue of reductionism in the practice of medicine it takes into account the holistic and integrative aspects that require the context of the patient in his biological and psychological entirety The emerging picture is that what first seems like hopeless disagreements turn out to be differences in emphasis Although genes play an important role in biology the focus on genetics and genomics has often been misleading The consensus view leads to pluralism both reductionist methods and a more integrative approach to biological complexity are required depending on the questions that are asked An even balance of contributions from scientists and philosophers of science representing a unique interchange between both communities interested in reductionism      The Infanticidal Logic of Evolution and Culture A. Samuel Kimball, 2007 This book argues that because existence costs the two words are cognates any living thing must economize shift more of its energy costs onto the world including other living things than its competitors are able to that to economize is therefore to engage in exchanges that are sacrificial at their core and that such economization is infanticidal in its ultimate implications A Samuel Kimball is Associate Professor of English at the University of North Florida      **Sex In The Future: The Reproductive Revolution and How it Will Change Us** Robin Baker, 2001-07-11 Provocative and often shocking Sex in the Future examines how advances in reproductive technology will change human behavior In vitro fertilization and surrogate motherhood could mean the end not only of infertility but also of the need for men and women to form relationships or for women to interrupt careers for pregnancy Sperm and egg storage mean people can literally shop for genes while cloning egg egg fertilization and other techniques will lead to fertility on demand in a Reproduction Restaurant What will all our choices be and how far down this road do we want to travel      **Forensic Science Handbook, Volume I** Adam B. **Pleasure - Book Two** Jon Knowles,2019-03-31 The ghosts that haunt our sexual pleasure were born in the Stone Age Sex and gender taboos were used by tribes to differentiate themselves from one another These taboos filtered into the lives of Bronze and Iron Age men and women who lived in city states and empires For the early Christians all sex play was turned into sin instilled with guilt and punished severely With the invention of sin came the construction of women as subordinate beings to men Despite the birth of romance in the late middle ages Renaissance churches held inquisitions to seek out and destroy sex sinners all of whom it saw as heretics The Age of Reason saw the demise of these inquisitions But it was doctors who would take over the roles of priests and ministers as sex became defined by discourses of crime degeneracy and sickness The middle of the 20th century saw these medical and religious teachings challenged for the first time as activists such as Alfred Kinsey and Margaret Sanger sought to carve out a place for sexual freedom in society However strong opposition to their beliefs and the growing exploitation of sex by the media at the close of the century would ultimately shape 21st century sexual ambivalence Book Two of this two part publication traces the history of sex from the Victorian Era to present day Interspersed with personal hauntings from his own life and the lives of friends and relatives Knowles reveals how historical discourses of sex continue to haunt us today This book is a page turner in simple and plain language about how sex got screwed up for millennia For Knowles if we know the history of sex we can get over it [Straight Science? Homosexuality. Evolution and Adaptation](#) Jim McKnight,2003-09-02 A genetic basis for homosexuality has been all but proved yet Darwinism

the most widely accepted evolutionary theory emphasises successful reproduction How do we explain a lifetime preference for non reproductive sex Whilst social constructionism offers explanations in terms of social learning and cultural preferences the body of evidence for a genetic predisposition to homosexuality grows Social learning argues that homosexual sex is merely misdirected and therefore futile but far from dying out it continues through the ages and is found in different cultures What if there was an evolutionary advantage to homosexuality Straight Science Homosexuality Evolution and Adaptation dares to ask such questions

**Reconceiving the Second Sex** Marcia C. Inhorn, 2009 Extensive social science research particularly by anthropologists has explored women s reproductive lives their use of reproductive technologies and their experiences as mothers and nurturers of children Meanwhile few if any volumes have explored men s reproductive concerns or contributions to women s reproductive health Men are clearly viewed as the second sex in reproduction This volume argues that the marginalization of men is an oversight of considerable proportions and thereby seeks to break the silence surrounding men s thoughts experiences and feelings about their reproductive lives It sheds new light on male reproduction from a cross cultural global perspective focusing not only upon men in Europe and America but also those in the Middle East Asia and Latin America Both heterosexual and homosexual married and unmarried men are featured in this volume which assesses concerns ranging from masculinity and sexuality to childbirth and fatherhood Thus men are brought back into the equation as reproductive partners progenitors fathers nurturers and decision makers

**Sexual Selections** Marlene Zuk, 2002-06-04 Zuk s analogies are better than anyone s pithy insightful and funny Who said feminists lack humor Zuk made me laugh with deep pleasure more than once as she reviewed the lessons of feminism for our understanding of non human animals Her main point that studying the lives of non humans should not be for the lessons they seem to provide for our political purposes but for the pleasure of knowing nature on its own terms will be compelling reading for all naturalists feminists and not feminists alike Patricia Adair Gowaty editor of *Feminism and Evolutionary Biology* Marlene Zuk uniquely combines a great breadth of knowledge about the behavior of animals with an ability to challenge conventional wisdom She also writes with a graceful style and a mischievous wit The result is a bold fresh and feminist book about how our sex lives evolved Matt Ridley author of *Genome* This is an engaging and much needed book which I hope will be widely read Sarah Blaffer Hrdy author of *Mother Nature Maternal Instincts and How They Shape the Human Species*
