Performance Art in the Second Public Sphere Katalin Cseh-Varga, Adam Czirak, 2018-02-01 Performance Art in the Second Public Sphere is the first interdisciplinary analysis of performance art in East Central and Southeast Europe under socialist rule. By investigating the specifics of event-based art forms in these regions, each chapter explores the particular critical roles that this work assumed under censorial circumstances. The artistic networks of Yugoslavia, Hungary, Latvia, Lithuania, Poland, Romania, East Germany, and Czechoslovakia are discussed with a particular focus on the discourses that shaped artistic practice at the time, drawing on the methods of Performance Studies and Media Studies as well as more familiar reference points from art history and area studies.

Circles and Spheres Bonnie Coulter-Leech, 2006-08-01 Introduces the shapes of circles and spheres, including information on how they are measured.

Humanitarianism and the Quantification of Human Needs Joël Glasman, 2020-01-06 This book provides a historical inquiry into the quantification of needs in humanitarian assistance. Needs are increasingly seen as the lowest common denominator of humanity. Standard definitions of basic needs, however, set a minimalist version of humanity, both in the sense that they are narrow in what they compare and that they set a low bar for satisfaction. The book argues that we cannot understand humanitarian governance if we do not understand how humanitarian agencies made human suffering commensurable across borders in the first place. The book identifies four basic elements of needs: As a concept, as a system of classification and triage, as a material apparatus, and as a set of standards. Drawing on a range of archival sources, including the United Nations Refugee Agency (UNHCR), Médecins sans Frontières (MSF), and the Sphere Project, the book traces the concept of needs from its emergence in the 1960s right through to the present day and United Nations Secretary-General Ban Ki-moon's call for evidence-based humanitarianism. Finally, the book assesses how the international governmentality of needs has played out in a recent humanitarian crisis, drawing on field research on Central African refugees in the Cameroonian borderland in 2014–2016. This important historical inquiry into the universal nature of human suffering will be an important read for humanitarian researchers and practitioners as well as readers with an interest in international history and development.

Key Concepts in Media and Communications Paul Jones, David Holmes, 2011-11-10 A sprightly critical and intelligent guided tour around the mansion of media and communications, cultural research, enormously useful for students and researchers.

James Curran, Goldsmiths University of London. A highly comprehensive guide to core concepts in media theory and criticism.

Andrew Goodwin, University of San Francisco. A great resource for new undergrads and something I urge my students to buy and use as a hand-first port of call throughout their studies.

Paul Smith, De Montfort University. This book covers the key concepts central to understanding recent developments in media and communications studies. Wide-ranging in scope and accessible in style, it sets out a useful, clear map of the important theories, methods, and debates. The entries critically explore the limits of a key concept as much as the traditions that define it. They include clear definitions, are introduced within the wider context of

the field and each one is fully cross referenced is appropriately illustrated with examples tables and diagrams provides a guide to further reading This book is an essential resource for students of media and communications across sociology cultural studies creative industries and of course media and communications courses **The Sphere**, 1900 **Sphere Packings, Lattices and Groups** J.H. Conway, N.J.A. Sloane, 2013-03-09 The second edition of this timely definitive and popular book continues to pursue the question what is the most efficient way to pack a large number of equal spheres in n dimensional Euclidean space The authors also continue to examine related problems such as the kissing number problem the covering problem the quantizing problem and the classification of lattices and quadratic forms Like the first edition the second edition describes the applications of these questions to other areas of mathematics and science such as number theory coding theory group theory analog to digital conversion and data compression n dimensional crystallography and dual theory and superstring theory in physics Results as of 1992 have been added to the text and the extensive bibliography itself a contribution to the field is supplemented with approximately 450 new entries *Sphere Packings, Lattices and Groups* John Conway, Neil J. A. Sloane, 2013-06-29 We now apply the algorithm above to find the 121 orbits of norm 2 vectors from the known norm 0 vectors and then apply it again to find the 665 orbits of norm 4 vectors from the vectors of norm 0 and 2 The neighbors of a strictly 24 dimensional odd unimodular lattice can be found as follows If a norm 4 vector $v \in \Lambda$ corresponds to the sum $25 - 1$ of a strictly 24 dimensional odd unimodular lattice A and a dimensional lattice then there are exactly two norm 0 vectors of Λ having inner product 2 with v and these norm 0 vectors correspond to the two even neighbors of A The enumeration of the odd 24 dimensional lattices Figure 17.1 shows the neighborhood graph for the Niemeier lattices which has a node for each Niemeier lattice If A and B are neighboring Niemeier lattices there are three integral lattices containing A and B namely $A + B$ and an odd unimodular lattice C cf Kne4 An edge is drawn between nodes A and B in Fig 17.1 for each strictly 24 dimensional unimodular lattice arising in this way Thus there is a one to one correspondence between the strictly 24 dimensional odd unimodular lattices and the edges of our neighborhood graph The 156 lattices are shown in Table 17.1 Figure 17.1 also shows the corresponding graphs for dimensions 8 and 16 Lie Sphere Geometry Thomas E. Cecil, 2007-10-29 Thomas Cecil is a math professor with an unrivalled grasp of Lie Sphere Geometry Here he provides a clear and comprehensive modern treatment of the subject as well as its applications to the study of Euclidean submanifolds It begins with the construction of the space of spheres including the fundamental notions of oriented contact parabolic pencils of spheres and Lie sphere transformations This new edition contains revised sections on taut submanifolds compact proper Dupin submanifolds reducible Dupin submanifolds and the cyclides of Dupin Completely new material on isoparametric hypersurfaces in spheres and Dupin hypersurfaces with three and four principal curvatures is also included The author surveys the known results in these fields and indicates directions for further research and wider application of the methods of Lie sphere geometry **Analysis of Culture and Religious Studies** Rev. Biomedical patents have been the subject of heated debate Regulatory agencies such as the European Patent Office make small decisions with big implications which escape scrutiny and revision when they decide who has access to expensive diagnostic tests whether human embryonic stem cells can be traded in markets and under what circumstances human health is more important than animal welfare Moreover the administration of the Trade Related Aspects of Intellectual Property Rights by the World Trade Organization has raised considerable disquiet as it has arguably created grave health inequities Those doubting the merits of the one size fits all approach ask whether priority should be given to serving the present needs of populations in dire need of medication or to promoting global innovation The book looks in detail into the legal issues and ethical debates to ask the following three main questions First what are the ideas goals and broader ethical visions that underpin questions of governance and the legal reasoning employed by administrative agencies Second how can we democratize the decision making process of technocratic institutions such as the European Patent Office Finally how can we make the global intellectual property system more equitable In answering these questions the book seeks to contribute to our understanding of the role and function of regulatory agencies in the regulation of the bioeconomy explains the process of interpretation of legal norms and proposes ways to rethink the reform of the patent system through the lens of legitimacy

The Formative Years of R. G. Collingwood William M. Johnston, 2012-12-06 Collingwood and Hegel R G Collingwood was a lonely thinker Begrudgingly admired by some and bludgeoned by others he failed to train a single disciple just as he failed to communicate to the reading public his vision of the unity of experience This failure stands in stark contrast to the success of Georg Wilhelm Friedrich Hegel who won many disciples to a very similar point of view and whose influence on subsequent thought having been rediscovered since 1920 has not yet been adequately explored Collingwood and Hegel share three fundamental similarities both men held overwhelming admiration of the Greeks both possessed uniquely broad knowledge of academic controversies of their day and both were inalterably convinced that human experience constitutes a single whole If experts find Collingwood's vision of wholeness less satisfactory than Hegel's much of the fault lies in the atmosphere in which Collingwood labored Oxford in the 1920s and 1930s sceptical and specialized was not the enthusiastic Heidelberg and Berlin of 1816 to 1831 What is important in Collingwood is not that he fell short of Hegel but that working under adverse conditions he came so close Indeed those unfamiliar with Hegel will find in Collingwood's early works especially in *Speculum Mentis* a useful introduction to the great German **Circles, Spheres and Spherical Geometry**

Hiroshi Maehara, Horst Martini, 2024-08-09 This textbook focuses on the geometry of circles spheres and spherical geometry Various classic themes are used as introductory and motivating topics The book begins very simply for the reader in the first chapter discussing the notions of inversion and stereographic projection Here various classical topics and theorems such as Steiner cycles inversion Soddy's hexlet stereographic projection and Poncelet's porism are discussed The book then delves into Bend formulas and the relation of radii of circles focusing on Steiner circles mutually tangent four circles in the plane and other related notions Next some fundamental concepts of graph theory are explained The book then proceeds to explore orthogonal cycle representation of quadrangulations giving detailed discussions of the Brightwell Scheinerman theorem an extension of the Koebe Andreev Thurston theorem Newton's 13 balls problem Casey's theorem an extension of Ptolemy's theorem and its generalizations The remainder of the book is devoted to spherical geometry including a chapter focusing on geometric probability on the sphere The book also contains new results of the authors and insightful notes on the existing literature bringing the reader closer to the research front Each chapter concludes with related exercises of varying levels of difficulty Solutions to selected exercises are provided This book is suitable to be used as textbook for a geometry course or alternatively as basis for a seminar for both advanced undergraduate and graduate students alike *Huxford's Old Book*
