Sphingolipids and Metabolic Disease L. Ashley Cowart,2011-09-15 Current thinking holds that obesity derives primarily from overnutrition though compelling arguments for other mechanisms like endocrine disruption by environmental pollutants also gain support from the literature In animals overnutrition is initially handled by adipose tissue expansion however exhaustion of this route of lipid sequestering results in oversupply of lipid to other tissues including skeletal muscle heart liver and others Failure of these tissues to clear excess lipids through either metabolism or sequestration into putatively inert triacylglycerols results in perturbation of bioactive lipid metabolism in cells In particular aberrant generation of bioactive sphingolipids is implicated in a multitude of pathological outcomes of metabolic disease including insulin resistance inflammation cardiomyopathy and others This volume addresses not only the fundamentals of sphingolipid metabolism and analysis but also the roles of sphingolipids in these disease processes

Cell Signaling in Vascular Inflammation Jahar Bhattacharya,2007-11-15 A comprehensive survey by leading basic and clinical researchers of the signal transduction mechanisms responsible for lung inflammation including vascular hyperpermeability white cell accumulation and vascular remodeling The authors cut across disciplines to bring together a broad based presentation of inflammatory challenge both in the initial phases of the inflammatory response as well as in the more prolonged phase of genomic involvement The book illuminates not only the processes of lung inflammation but also the potential for developing new therapeutic strategies to combat inflammatory lung disease

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance,J.E. Vance,2002-12-06 The first edition of this book was published in 1985 The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs The book is not a collection of exhaustive reviews but a current and readable summary of diverse aspects of lipids It is intended as an advanced and up to date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids lipoproteins and membranes
