presenting three acceptability judgment studies for German The results reveal the novel generalization that determiner sharing is not uniquely dependent on gapping but can also occur in stripping contexts The analysis that is developed in the second part shows that the apparent parasitism of determiner sharing can be derived by combining two independently available processes namely a type of ellipsis like gapping and a type of movement like split topicalization The analysis thus avoids any construction specific additions to the syntactic framework The findings constitute an argument for approaches to ellipsis that posit an obligatory movement step and thereby contribute to an ongoing debate in the field Languages and

Quantum Theory without Reduction, Cini, 2017-10-19 Quantum theory offers a strange and perhaps unique case in the history of science Although research into its roots has provided important results in recent years the debate goes on Some theorists argue that quantum theory is weakened by the inclusion of the so called reduction of the state vector in its

foundations Quantum Theory without Reduction presents arguments in favor of quantum theory as a consistent and complete theory without this reduction and as a theory capable of explaining all known features of the measurement problem This collection of invited contributions defines and explores different aspects of this issue bringing an old debate into a new perspective and leading to a more satisfying consensus about quantum theory The book will be of interest to researchers in theoretical physics and mathematical physics involved in the foundations of quantum theory Scientists engineers and philosophers interested in the conceptual problems of quantum theory will also find this work stimulating
