modified sense applies to a workout For a strenuous and demanding workout its best to physically prepare yourself by steadily increasing the body s temperature with patience By giving your body a nice warm up with many of the techniques like jogging walking etc you are in fact improving blood circulation within different joints muscles and tendons much like oiling a squeaky wheel With the increased blood flow the heart rate also rises and the muscles warm up to prevent any injury from taking place Moreover warm up exercises also have a psychological affect and they prepare your brain by easing it into the physical activities that are soon to follow This is extremely helpful in exercises like weight lifting high intensity running and aerobics The body and mind thus synchronize and ease into the workout making sure that no part of the body faces any injury as a result of the exercises that are soon to follow Keep reading on and find out the details of a warm up
