ambitious here we attempt to bridge the gap between soil physicists agronomists horticulturists hydraulic engineers designers manufacturers and users of drip irrigation systems We believe that progress in drip irrigation hinges on the contributions of professionals made in all related disciplines and their cooperation The last decade has seen great development in the field of drip irrigation although the drip irrigated area has not increased at the same rate as in the previous decade However our understanding of the processes involved in water and solute distribution and in plant response has increased vastly The tools for optimal design of drip systems have improved tremendously The main progress has been in the development and in the manufacture of sophisticated equipment not only improved types of emitters and laterals but also auxiliary equipment such as new filtration systems controllers and sensors In this book we highlight the need to maintain a proper balance between the hydraulic design of drip systems and aspects of their management and maintenance Drip irrigation has a potential for high water use efficiency but many well designed systems suffer from bad management We are indebted to the late Eshel Bresler for his contribution to our understanding of water and solute movement under drip irrigation and its application to system design Some parts of a previous publication entitled Drip irrigation manual authored by S Dasberg and E *Drip and Sprinkler Irrigation System Design* Abdurehman Ahmed, 2024-09-13 Research Paper postgraduate from the year 2024 in the subject Agrarian Studies language English abstract This book on drip and sprinkler irrigation system design evaluates the latest available books and research in the field and presents them in a concise and clear manner that can be useful as a reference for graduate and undergraduate students including practicing engineers The reference book contains up to date data and information on the design of drip and sprinkler irrigation systems The book is divided into two parts the first part deals with the basics of sprinkler irrigation and goes deeper into the design part by mostly using the Keller and Bliesner book and the second part details all about drip irrigation system right from the components and types to the design detail Agriculture originated when the communities began adding food growing to hunting and foraging in the Neolithic era 8 000 10 000 years ago In the beginning of this process agriculture was based on rainfall and uncontrolled river floods Irrigation as an activity started to develop in places where natural water resources mainly rains were insufficient to support the current population This in fact was one of the main reasons for the appearance of central authorities involved in water production and control
