Rajaraman, 1999 This book explains what a supercomputer is and why such a machine is needed to solve challenging problems in science and engineering The architecture of super computers which distinguishes them from other computers is explained and the need to vectorise programs to make effective use of supercomputers is brought out Supercomputers : government plans & policies : background paper. , 1986 **Advanced Network Technology** , 1993 This background paper analyzes technologies for tomorrow's information superhighways Advanced networks will first be used to support scientists in their work but will soon be deployed more widely in business entertainment health care and education Significant progress has been made toward the development of gigabit network technology since the basic characteristics of the design of broadband networks began to emerge in the mid 1980s No insurmountable technological barriers to the gigabit National Research and Education Network NREN appear to exist as work in the testbeds i e initial testing programs is demonstrating Testbed networks model the configuration in which the technology is expected to be deployed in that test sites are separated by realistic distances and realistic technological applications will be used Testbed applications research helps researchers understand how the NREN can be used to achieve science goals and as a testbed in itself demonstrating technology that can be deployed more widely The following topics are reviewed 1 the Internet 2 broadband network technology 3 gigabit research and 4 application of testbed research One table and 17 figures illustrate the discussion Highlighted points are summarized in 10 boxes SLD

Promoting High-performance Computing and Communications ,1993 In 1991 the Federal Government initiated the multiagency High Performance Computing and Communications program HPCC to further the development of U S supercomputer technology and high speed computer network technology This overview by the Congressional Budget Office CBO concentrates on obstacles that might prevent the growth of the high performance

computing and data communications industries The market for supercomputers relative to that of other technologies is small The main obstacle to the rise of large commercial markets for HPCC developed technology is that cheaper workstations may preempt further growth of the supercomputer market as a whole In addition an economic inertia may occur as conventional supercomputers working well become difficult to dislodge in the marketplace The National Research and Educational Network NREN is central to the HPCC program The ways in which Internet is becoming the core of a national data network promise well for HPCC in the future but HPCC technology might be precluded from having a substantial effect on the current markets if demand for high speed communications does not emerge as envisaged by HPCC leaders Cost considerations and policy directions for HPCC are discussed Five tables six figures and one box illustrate the discussion Three appendixes discuss HPCC technology spinoffs and speed calculations SLD Computerworld ,1990-09-03 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network *The Effect of Changing Export Controls on Cooperation in Science and Technology* United States.
