*Towards a CSCW Framework for Scientific Cooperation in Europe* Hannes P. Lubich, 1995-01-26 This monograph presents the still young but already large and very active interdisciplinary realm of computer supported cooperative work CSCW in a systematic and well balanced way Besides technical progress also the cultural social legal psychological and economic aspects of CSCW are discussed The book makes accessible a wealth of information and culminates in the development and detailed discussion of a Collaboratory suitable to fulfil the needs of scientific cooperation in Europe The book addresses CSCW research and development professionals as well as the general scientist interested in CSCW based scientific cooperation The bibliography with its more than 600 entries and the subject index are particularly comprehensive and helpful

*The Design of Computer Supported Cooperative Work and Groupware Systems* Dan Shapiro, Michael Tauber, Roland Traunmüller, 1996-03-29 The phrases the information superhighway and the information society are on almost everyone's lips CSCW and groupware systems are the key to bringing those phrases to life To an extent that would scarcely have been imaginable a few years ago the contributions in this volume speak to each other and to a broader interdisciplinary context The areas of ethnography and design the requirements and principles of CSCW design CSCW languages and environments and the evaluation of CSCW systems are brought together to bring to light how activities in working domains are really in practice carried out The aim above all is to do justice to the creativity and versatility of those whose work they aim to support

**Handbook of Discourse Processes** Arthur C. Graesser, Morton Ann Gernsbacher, Susan R. Goldman, 2003-04-02 This Handbook is a comprehensive overview of the multidisciplinary field of discourse processes The editors hope to foster a more interdisciplinary approach to discourse processing with this Handbook while simultaneously developing an appreciation within the field for multiple methods of establishing rigorous scientific claims The field of discourse processes is currently fueled by seven dominant approaches discourse psychology corpus analysis computational discourse discourse technologies conversation analysis hybrid qualitative and quantitative approaches and cultural foundations The contributors also discuss future trends in research including corpus analyses the integration of neuroscience with discourse research and the development of more advanced computer technologies for analyzing discourse

*Workflow Management Systems for Process Organisations* Thomas Schael, 2007-12-03 All of us have learned a lot during this exercise and the enormous success of the first edition of this book shows the great international interest for the topic and the results A French edition appeared last year and met with equal interest Springer Verlag has therefore decided to publish a second edition of this book which is not just a reprint but brings the literature and results to the newest state This is a rare occurrence in the history of the LNCS series We congratulate Thomas Schael on this success and we are sure that reader scientists and practitioners will likewise profit from it Aachen and Milan Giorgio De Michelis Klaus Henning Matthias Jarke August 1998 Preface to the Second Edition This book is a bit of a mixture of scientific and management literature It is

based on my research activities in the CSCW community and also reflects the last ten years of my professional experience in consulting I have had the opportunity to live in different cultural settings to work in many companies and to meet people all over the world which has helped me to reflect on what I was doing and to focus on the content of this book This second edition reflects the fast moving field of Computer Supported Cooperative Work CSCW and the discussion on Business Process Re engineering BPR It contains the latest developments in the scientific and managerial discussion of the issues developed in the first edition *Advancing Research in Information and Communication Technology* Michael Goedicke, Erich Neuhold, Kai Rannenber, 2021-08-03 For 60 years the International Federation for Information Processing IFIP has been advancing research in Information and Communication Technology ICT This book looks into both past experiences and future perspectives using the core of IFIP's competence its Technical Committees TCs and Working Groups WGs Soon after IFIP was founded it established TCs and related WGs to foster the exchange and development of the scientific and technical aspects of information processing IFIP TCs are as diverse as the different aspects of information processing but they share the following aims To establish and maintain liaison with national and international organizations with allied interests and to foster cooperative action collaborative research and information exchange To identify subjects and priorities for research to stimulate theoretical work on fundamental issues and to foster fundamental research which will underpin future development To provide a forum for professionals with a view to promoting the study collection exchange and dissemination of ideas information and research findings and thereby to promote the state of the art To seek and use the most effective ways of disseminating information about IFIP's work including the organization of conferences workshops and symposia and the timely production of relevant publications To have special regard for the needs of developing countries and to seek practicable ways of working with them To encourage communication and to promote interaction between users practitioners and researchers To foster interdisciplinary work and in particular to collaborate with other Technical Committees and Working Groups The 17 contributions in this book describe the scientific technical and further work in TCs and WGs and in many cases also assess the future consequences of the work's results These contributions explore the developments of IFIP and the ICT profession now and over the next 60 years The contributions are arranged per TC and conclude with the chapter on the IFIP code of ethics and conduct

**Perspectives of Information Systems** Vesa Savolainen, 2012-12-06 Information system science defined broadly is highly interdisciplinary because it can be seen as the effective analysis design delivery use and impact of information technology in organizations and society Many basic as well as advanced books on information systems and their development apply approaches and theories from such disciplines as technology management science economics mathematics psychology sociology and philosophy Such new branches of information system science as mobile information systems multimedia information systems telematic commerce and cooperative work support systems have incorporated theories from such disciplines as organization science education sciences communication science and

musicology Objectives and Uses of This Book This book focuses on various issues in information systems and their development as well as on the advanced utilization of new information technology The fields and issues that are analyzed in this book have not been discussed in the same context in the current scientific literature although they are becoming more important in information systems development This book includes both theoretical foundations and practical approaches for each topic and therefore it is of relevance both to scientists of information systems and to practitioners in information systems development introduction and use Large companies and software houses will also find this book useful in its discussion of methods for evaluating information technologies systems methodologies and tools Our colleagues have expressed a need for this kind of book We offer new perspectives on key topics in information systems research Workflow Management Systems and Interoperability Asuman Dogac, Leonid Kalinichenko, Tamer Özsu, Amit Sheth, 2012-12-06 Workflow management systems WFMS are enjoying increasing popularity due to their ability to coordinate and streamline complex organizational processes within organizations of all sizes Organizational processes are descriptions of an organization's activities engineered to fulfill its mission such as completing a business contract or satisfying a specific customer request Gaining control of these processes allows an organization to reengineer and improve each process or adapt them to changing requirements The goal of WFMSs is to manage these organizational processes and coordinate their execution was demonstrated in the first half The high degree of interest in WFMSs of the 1990s by a significant increase in the number of commercial products once estimated to about 250 and the estimated market size in combined 2 billion in 1996 Ensuing maturity product sales and services of about is demonstrated by consolidations during the last year Ranging from mere e-mail based calendar tools and flow charting tools to very sophisticated integrated development environments for distributed enterprise wide applications and systems to support programming in the large these products are finding an eager market and opening up important research and development opportunities In spite of their early success in the market place however the current generation of systems can benefit from further research and development especially for increasingly complex and mission critical applications Computer Applications in Production Engineering Qiangnan Sun, Zesheng Tang, Yijun Zhang, 2016-02-02 This volume reviews the latest global research results in computer applications The book contains a selection of papers presented at the Fifth International Conference on Computer Applications in Production and Engineering arranged by the International Federation for Information Processing and held in Beijing China in May 1995

**Organizational Learning and Technological Change** Cristina Zuccheromaglio, Sebastiano Bagnara, Susan U. Stucky, 2012-12-06 What the Book Is About This book is about the problem of organizational learning that is the analysis of organizations conceived as learning systems In order to survive in a period of a rapid change organizations must innovate and then to develop and exploit their abilities to learn The most innovative organizations are those that can respond with great efficiency to internal and external changes They respond to and generate technological change by acting as effective

learning systems They maximize the learning potential of ongoing and normal work activities The organizational structure and the technology allow members to learn while the organizations itself learns from its members So organizations reach high levels of innovation when structured to take advantage of the social distributed participative situated processes of learning developed by its members in interaction with the technological environment Organizations should consider learning as an explicit productive objective They must create integrated learning mechanisms that encompass technological tools reward and incentive systems human resource practices belief systems access to information communication and mobility patterns performance appraisal systems organizational practices and structures The design of efficient learning organizations requires cognitive technological and social analyses All the computer based technologies e g office automation communication and group decision support not only those devoted to and used in training activities have to be considered as tools for organizational learning and innovation

**Information, Organisation and Technology** Kecheng Liu, Rodney J. Clarke, Peter Bøgh Andersen, Ronald K. Stamper, 2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of *Information Organisation and Technology*

*Engineering for Sustainability* Dennis F.X. Mathaisel, Joel M. Manary, Ned H. Criscimagna, 2012-09-17 Sustainability and sustainable development have become popular goals They have also become wide ranging terms that can be applied to any entity or enterprise on a local or a global scale for long time periods As enterprises and systems become more complex and development a support costs increase the question remains how does one engineer an enterprise or a product for sustainability Engineering for Sustainability provide common sense information for engineering planning and carrying out those tasks needed to sustain military products and services and in turn the entire enterprise This book tackles the problem from the top down beginning with discussions on planning initiatives and implementing sustainable activities It outlines a

series of principles to help engineers design products and services to meet customer and societal needs with minimal impact on resources and the ecosystem Using examples and case studies from the government military academia and commercial enterprises the authors provide a set of tools for long term sustainability and explain how an entire enterprise can be engineered to sustain itself Achieving the high levels of sustainability needed in complex military and industrial systems is too often an elusive goal Competing rules and regulations conflicting goals and performance metrics the desire to incorporate promising commercial off the shelf technologies and the pressures of maintenance schedules contribute to this elusiveness This book provides an analysis of and prescription for the strategies principles and technologies necessary to sustain the military and the systems it develops and uses This can then be used to make any enterprise more efficient and cost effective in a changing environment
