, *Linear Operators and Approximation / Lineare Operatoren und Approximation* Bautzer, Kahane, Nagy, 2012-12-06
These proceedings contain the lectures presented at the Conference on Linear Operators and Approximation held at the Oberwolfach Mathematical Research Institute August 14-22 1971. There were thirty-eight such lectures while four additional papers subsequently submitted in writing are also included in this volume. Two of the three lectures presented by Russian mathematicians are rendered in English the third in Russian. Furthermore there is a report on new and unsolved problems based upon special problem sessions with later communications from the participants. In fact two of the papers included are devoted to solutions of some of the problems posed. The papers have been classified according to subject matter into five chapters but it needs little emphasis that such thematic groupings are necessarily somewhat arbitrary. Thus Chapter I on Operator Theory is concerned with linear and non-linear semi-groups structure of single operators unitary operators spectral and ergodic theory. Chapter II on Topics in Functional Analysis includes papers on Riesz spaces boundedness theorems generalized limits and distributions. Chapter III entitled Approximation in Abstract Spaces ranges from characterizations of classes of functions in approximation theory to approximation theoretical topics connected with extensions to Banach or more general spaces. Chapter IV contains papers on harmonic analysis in connection with approximation and finally Chapter V is devoted to approximation by splines algebraic polynomials rational functions and to Padé approximation. A large part of the general editorial work connected with these proceedings was competently handled by Miss F. Feber while G. League of Nations Publications, 1921. *French Vernacular Books / Livres vernaculaires français (FB)* (2 vols.) Andrew Pettegree, Malcolm Walsby, Alexander Wilkinson, 2007-11-30. Many of the items described are editions and even complete texts fully unknown and re-discovered by the project. French Vernacular Books is an invaluable research tool for all students and scholars interested in the history culture and literature of France as well as historians of the early modern book world. Grante, **Arithmetic Fundamental Groups and Noncommutative Algebra** Michael D. Fried, Yasutaka Ihara, 2002 The arithmetic and geometry of moduli spaces and their fundamental groups are a very active research area This book offers a complete overview of developments made over the last decade The papers in this volume examine the geometry of moduli spaces of curves with a function on them The main players in Part 1 are the absolute Galois group $G_{\mathbb{Q}}$ of the algebraic numbers and its close relatives By analyzing how $G_{\mathbb{Q}}$ acts on fundamental groups defined by Hurwitz moduli problems the authors achieve a grand generalization of Serre's program from the 1960s Papers in Part 2 apply theta functions and configuration spaces to the study of fundamental groups over positive characteristic fields In this section several authors use Grothendieck's famous lifting results to give extensions to wildly ramified covers Properties of the fundamental groups have brought collaborations between geometers and group theorists Several Part 3 papers investigate new versions of the genus 0 problem In particular this includes results severely limiting possible monodromy groups of sphere covers Finally Part 4 papers treat Deligne's theory of Tannakian categories and arithmetic versions of the Kodaira Spencer map This volume is geared toward graduate students and research mathematicians interested in arithmetic algebraic geometry

Crime, Histoire et Sociétés, 2000/2, *Catalogue of the Historical Library of A.D. White*, 1894 *EUROCAL '87* James H. Davenport, James Harold Davenport, 1989-08-09 This is the sixth in a series of conference proceedings of international conferences on computer algebra held in Europe. All the preceding ones have also been published as Lecture Notes in Computer Science. They contain original research material not published elsewhere and a few invited lectures summarising the state of the art. Computer algebra is the science of using computers to do algebraic calculations rather than the purely arithmetic calculations which we all know computers can do. These calculations may be polynomial like calculations, one thread of the conference was devoted to polynomial algorithms or may relate to other areas of mathematics such as integration, the solution of differential equations or geometry. A second thread was devoted to those topics. The calculations can be applied in a wide range of scientific and engineering subjects and in branches of mathematics. Physics has benefitted especially from these calculations and the proceedings contain many papers on this and also papers on applications in computer aided design and robotics to name but a few other applications. The third thread of the proceedings was devoted to these applications and to the computer algebra systems which perform these calculations. *Catalogue of the Historical Library of Andrew Dickson White: The French revolution* Cornell University Library, President White Library, 1894 **NOAA Technical Report NMFS CIRC.**, 1980 **Number Theory** Sinnou David, 1995 This is the fourteenth annual volume arising from the *Seminaire de Theorie de Nombres de Paris* covering the whole spectrum of number theory *Catalogue of Scientific Papers (1800-1900): ser. 1, 1800-1863* Royal Society (Great Britain), 1871

Algebraic Geometry and Singularities Antonio Campillo Lopez, Luis Narvaez Macarro, 2012-12-06 The focus of this volume lies on singularity theory in algebraic geometry. It includes papers documenting recent and original developments and methods in subjects such as resolution of singularities, D-module theory, singularities of maps and geometry of curves. The papers originate from the Third International Conference on Algebraic Geometry held in La Rbida, Spain, in December 1991. Since then the articles have undergone a meticulous process of refereeing and improvement and they have been organized into a comprehensive account of the state of the art in this field.
