Laser Modification of the Wettability Characteristics of Engineering Materials (Engineering Materials Series ERS Publication 3) Jonathan Lawrence, Li Li, 2001 The techniques available to engineers for the modification of a material's wettability characteristics are invariably extremely complex and difficult to control The use of lasers however has been shown to provide a clean accurate and versatile way of modifying and

improving the wettability characteristics of a wide range of engineering materials Lawrence and Li have amply demonstrated the practicability of employing different types of lasers to effect changes in the wettability characteristics of a number of engineering materials Laser Modification of the Wettability Characteristics of Engineering Materials makes extensive and comparative studies of the behavior and properties of composite ceramic metallic and polymeric materials The final chapter practical applications of the use of lasers in modifying material behavior is particularly useful as it puts this cutting edge research in industrial context The authors have extended the scope of their industrially based research to present a very useful coherent source for engineers This excellent volume will be of great value to all those engineers and materials technologists working in industry or research institutions interested in the latest developments of property manipulation Tribologists surface technologists those concerned with protective coatings and bonding materials as well as anyone interested in laser technology opt electronics marking and laser engraving will find Laser Modification a useful guide
