## **Surfactant Replacement Therapy In Neonatal And Adult Respiratory Distress Syndrome:**

Surfactant Replacement Therapy Burkhard Lachmann, 2012-12-06 I am very happy and honoured to have so many famous contributors from around the world presenting their knowledge and experience in this book including Dr Rufer who as early as 1967 attempted to improve the pressure volume curve of a child dying from RDS using dried surfactant from dogs Drs Enhorn and Robertson who were the first to treat rabbit fetuses with surfactant replacement and impressively demonstrated that surfactant improved lung mechanics and Dr Fujiwara who at the end of the 1970s had already successfully treated the first babies with surfactant replacement and published this work already in 1980 Thus the idea of surfactant replacement therapy is now more or less 20 years old and almost 10 years have passed since the first publication by Dr Fujiwara of his impressive clinical results Up to now September 1988 about 2 200 babies have been treated worldwide with tracheal instillation of surfactant with most promising results The type of surfactant used varies from pure natural extracts from bovine or pig lungs to surfactant extracted from human amniotic fluid to pure phospholipids To date however there is still no surfactant commercially available except in Japan in spite of the fact that it is urgently awaited by neonatologists and intensive care doctors throughout the world This volume is based on the contributions presented at the international congress on Surfactant Replacement Therapy which was held in Rotterdam The Netherlands in November 1987

*Oxygen Transport to Tissue XV* Peter Vaupel, Rolf Zander, Duane F. Bruley, 2012-12-06 Seventeen years after the 2nd International Symposium on Oxygen Transport to Tissue which was held in Mainz in March 1975 the local Organizing Committee and the Board of ISOTT were pleased to host the ISOTT Conference in Mainz on the Rhine again The venue of the 20th meeting was the prestigious fully restored Schloss Waldthausen Waldthausen Castle which provided a special setting for ISOTT 1992 The beautiful front view of the castle became part of the ISOTT 1992 logo The 20th ISOTT Meeting was held in Mainz from August 26th through August 30th 1992 The Conference attracted 200 active participants from 16 countries The theme of this meeting emphasized oxygen transport to tumors but as in earlier meetings essentially all aspects of oxygen transport within the body were covered as demonstrated by the manuscripts comprising this volume of the series *Oxygen Transport to Tissue* All manuscripts were reviewed Extensive revisions were made in about 25% and modest revision in about another 30% Because we had to compromise between the aim of rapid publication on the one hand and the need for thorough review on the other minor errors in format and some typographical errors were not corrected Except for some revisions all of the original camera ready manuscripts in this volume were prepared by the authors themselves and we greatly appreciate their cooperation

**ARDS Acute Respiratory Distress in Adults** Timothy W. Evans, C. Haslett, 2013-11-11 Great progress has been made since the first description of the acute respiratory distress syndrome by the Denver group in 1967 *Lancet* Although we introduced the term adult respiratory distress syndrome in our second and more detailed description of the syndrome in 1971 this was probably a mistake for the simple reason that children also suffer the same syndrome following acute lung insults Today the syndrome of acute respiratory distress in adults ARDS is recognized as a worldwide problem but the prevalence of disease varies in different parts of the world A huge amount of research has focused on the

mechanisms of acute lung injury and yet the exact sequence of events and mediators in inflammatory cascade which result in acute respiratory failure from ARDS is not known but many possibilities exist. The definition of ARDS has been gradually modified in recent years and investigators around the world are now collaborating in order to establish more uniform concepts in identification of risk factors and mechanisms of lung injury which someday will result in improved approaches to management. Already at least some centers are showing improved outcomes in ARDS achieving an approximate 60% survival rate. In the past most large series documented only about a 40% survivability taking all causes of ARDS. This apparent progress is likely attributable to more meticulous and disciplined care than any specific pharmacologic attack on the basic mechanism resulting in ARDS.

The Respiratory Tract in Pediatric Critical Illness and Injury Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-18 The principal role of the respiratory system is to permit efficient exchange of respiratory gases O<sub>2</sub> and CO<sub>2</sub> with the environment The respiratory system is unique in that it is constantly exposed to a barrage of foreign substances from both the internal environment at any one point in time approximately one half of the cardiac output is received by the

lungs and the external environment with each breath the respiratory tract is exposed to pollens viruses bacteria smoke etc According to the Centers for Disease Control and Prevention diseases of the respiratory system were the seventh and eighth leading causes of deaths in children aged 1 to 19 years in 2003 1 Dr George A Gregory one of the founding fathers of pediatric critical care medicine once estimated that acute respiratory failure accounts for nearly 50% of all admissions to the pediatric intensive care unit PICU 2 Just as important are the many diseases that affect the respiratory system that are not associated with acute respiratory failure but nevertheless constitute a major portion of the practice of pediatric critical care medicine some of which account for significant morbidity and mortality 3 Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe Derek S Wheeler Hector R Wong Thomas P **Perinatal and Pediatric Respiratory Care - E-Book** Brian K.
