**The High Frontier** Gerard K. O'Neill, 2000 *Provisional Cities* Renata Tysczuk, 2017-11-02 This book considers the provisional nature of cities in relation to the Anthropocene the proposed geological epoch of human induced changes to the Earth system It charts an environmental history of curfews admonitions and alarms about dwelling on Earth Provisional cities are explored as exemplary sites for thinking about living in this unsettled time Each chapter focuses on cities settlements or proxy urbanisations including past disaster zones remote outposts in the present and future urban fossils The book explores the dynamic changing and contradictory relationship between architecture and the global environmental crisis and looks at how to re position architectural and urban practice in relation to wider intellectual environmental political and cultural shifts The book argues that these rounder and richer accounts can better equip humanity to think through questions of vulnerability responsibility and opportunity that are presented by immense processes of planetary change These are cautionary tales for the Anthropocene Central to this project is the proposition that living with uncertainty requires that architecture is reframed as a provisional practice This book would be beneficial to students and academics working in architecture geography planning and environmental humanities as well as professionals working to shape the future of cities

**The Visioneers** W. Patrick McCray, 2017-06-06 The story of the visionary scientists who invented the future In 1969 Princeton physicist Gerard O'Neill began looking outward to space colonies as the new frontier for humanity's expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society's future needs could be met using self replicating nanoscale machines These modern utopians predicted that their technologies could transform society as humans mastered the ability to create new worlds undertook atomic scale engineering and if truly successful overcame their own biological limits The Visioneers tells the story of how these scientists and the communities they fostered imagined designed and popularized speculative technologies such as space colonies and nanotechnologies Patrick McCray traces how these visioneers blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future He shows how they built networks that communicated their ideas to writers politicians and corporate leaders But the visioneers were not immune to failure or to the lures of profit celebrity and hype O'Neill and Drexler faced difficulty funding their work and overcoming colleagues skepticism and saw their ideas co-opted and transformed by Timothy Leary the scriptwriters of Star Trek and many others Ultimately both men struggled to overcome stigma and ostracism as they tried to unshackle their visioneering from pejorative labels like fringe and pseudoscience The Visioneers provides a balanced look at the successes and pitfalls they encountered The book exposes the

dangers of promotion oversimplification misuse and misunderstanding that can plague exploratory science But above all it highlights the importance of radical new ideas that inspire us to support cutting edge research into tomorrow s technologies

**Space and Security** Peter L. Hays, 2011-03-03 This thorough examination of the roots and motivations for U S national security space policy provides an essential foundation for considering current space security issues During the Cold War era space was an important arena for the clashing superpowers yet the United States government chose not to station weapons there Today new space security dynamics are evolving that reflect the growing global focus upon the broad potential contributions of space capabilities to global prosperity and security Space and Security A Reference Handbook examines how the United States has developed and implemented policies designed to use space capabilities to enhance national security providing a clear and complete evaluation of the origins and motivations for U S national security space policies and activities The author explains the Eisenhower Administration's quest to develop high technology intelligence collection platforms to open up the closed Soviet state and why it focused on developing a legal regime to legitimize satellite overflight for the purposes of gathering intelligence *Encyclopedia of Science and Technology Communication* Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed

only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses. Even so, those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology, and philosophy of science as well as relevant media and communication theory principles of risk communication, new trends, and how to evaluate the effectiveness of science communication programmes. To mention just a few of the major challenges, this work will help to develop and enhance such understanding as it addresses these challenges and more. Topics covered include advocacy, policy, and research organizations; environmental and health communication; philosophy of science; media theory and science communication; informal science education; science journalism as a profession; risk communication theory; public understanding of science; pseudo science in the news; special problems in reporting science and technology; science communication ethics.

**Instructed and Instructive Actions** Michael Lynch, Oskar Lindwall, 2023-11-30. The contributors to this volume take up the theme of instructed and instructive actions. Harold Garfinkel, the founder of ethnomethodology, initiated the study of instructed actions as a way to elucidate the embodied production of social order in real time. Studies of instructions and the actions of following them provide empirical content to the classical theoretical issue of how rules, norms, and other normative guidelines are conveyed, understood, and used for producing social actions and structures. The studies in this volume address novel technologies of instructed action and non-obvious ways in which ordinary actions turn out to be instructive for participants in immediate situations of action and interaction. In some cases, the studies address specialized, practical, artistic, and recreational activities, and in others, they address commonplace modes of action and interaction. In all cases, they focus on how the manifest organization of specific activities is organized with and without explicitly formulated instructions. This book will appeal to scholars across the social sciences with interests in ethnomethodological approaches to research by contributing to understandings of how specific actions are instructed and instructive in the circumstances in which they are produced.
