Committee on Science and Technology, 1980 Great Inventions that Changed the World James Wei, 2012-07-02 GREAT INVENTIONS THAT CHANGED THE WORLD Discover the inventions that have made our world what it is today A great invention opens the door to a new era in human history The stone axe for example invented some 2 million years ago in East Africa enabled us to enter the human path of endless improvements through inventions The taming of fire enabled us to cook food as well as leave the warmth of Africa and move to the frigid lands of the North From the stone axe to the computer and the Internet this book provides a fascinating tour of the most important inventions and inventors throughout history You ll discover the landmark achievements and the men and women that made the world what it is today Great Inventions That Changed the World is written by Professor James Wei a renowned educator and engineer who holds several patents for his own inventions Following an introductory chapter examining the role of inventors and inventions in fueling innovation and global advancement the book is organized to show how inventions are spurred by human needs and desires including Work Food clothing and housing Health and reproduction Security Transportation Information The good life As you progress through the book you ll not only learn about inventions and inventors but also the impact they have had on our lives and the society and environment in which we live today Inventions solve problems but as this book so expertly demonstrates they can also directly or indirectly create new problems as well from pollution to global warming to bioterrorism By enabling us to understand the impact of inventions throughout history this book can help guide the next generation of citizens decision makers and inventors **Our energy future is not set in stone** CHARLEZ Philippe A., 2014-06-01 If technology is an undeniable catalyst for progress then energy is its inevitable basic food It is no coincidence that since the industrial revolution economic growth has been fuelled first by coal then by oil gas Although energy intensity reserves are still sizeable in emerging economies and the technological catalyst can partially dematerialize growth it is unrealistic to separate growth from its basic food And even if the fossil energies share oil gas coal will lose a few percent to nuclear and renewable energies over the next decades all the indicators point to a world mix in which the fossil energy share will still top 75% by 2035 Driven by growth in emerging countries the demand for oil and gas will continue to grow steadily Even if there are enough oil and gas reserves to see us through the next three decades will the industry be able to exploit and produce new resources that are increasingly complex to develop at a sufficient rate and which are often located in politically unstable countries Not to mention the added challenge of the growing numbers of stakeholders who are increasingly insistent on industrial safety environment and societal issues In particular will non conventional resources whose production growth could defer the oil gas peaks by several decades be able to withstand political and environmental lobbies The evolution of oil gas landscape over the past few years reveals a disturbing increase in the time required to develop large new fields and an accelerated decline of the production base due to the ageing of most of the

mature field facilities This book aims to analyze all the critical factors technical political economic social and human that could potentially accelerate or delay the maintenance and redevelopment of mature producing fields as well as the discovery and development of new conventional and unconventional resources Insofar as in 2035 oil and gas still account for more than half of the world primary energy consumption the appropriate management of these critical factors is crucial to ensuring at least in the medium term the Grail of Growth However the hope of achieving the 450 ppm targets of Copenhagen has been shattered bad news for the human population which is becoming more concerned with ensuring its short term growth than with its long term survival Our energy future is not set in stone Contents 1 The food of growth 2 Limiting the decline of the basement 3 The increasing complexity of new developments 4 Reaching excellence in safety 5 Obtaining an environmental and social license to operate 6 The Energy of the Energy 7 Our energy future is not set in stone **Scientific American**, 1904 **Simplified TRIZ** Kalevi Rantanen, David W.
