whether this be negative or positive and the essays in this interdisciplinary collection probe each in its own way the possibilities and problems inherent in thinking holistically Christian McMillan Roderick Main and David Henderson bring together established academics and emerging scholars across subject areas and disciplinary approaches to reveal the multiplicity and complexity of issues involved in holism Divided into four parts the chapters determine key strands of thinking explicitly or implicitly underpinning contemporary holistic thought including what ethical conclusions might most reasonably be drawn from such thought Accessible and diverse this extensive volume contains chapters from the perspective of history ecology psychotherapy poetry mythology and an especially strong representation of continental philosophy and Jungian depth psychology Due to its multi disciplinary nature the book represents an unparalleled discussion of the meanings and implications of holism Written by an innovative and international calibre of contributors this pioneering collection will be essential reading for practitioners in depth psychology and scholars of Jungian studies as well as academics and students of philosophy religious studies spirituality history and the history of ideas The book is a rich resource for the enhancement of critical reflection among all those with an interest in holism

David Bohm: Causality and Chance, Letters to Three Women Chris Talbot, 2017-04-17 The letters transcribed in this book were written by physicist David Bohm to three close female acquaintances in the period 1950 to 1956 They provide a background to his causal interpretation of quantum mechanics and the Marxist philosophy that inspired his scientific work in quantum theory probability and statistical mechanics In his letters Bohm reveals the ideas that led to his ground breaking book Causality and Chance in Modern Physics The political arguments as well as the acute personal problems contained in these letters help to give a rounded human picture of this leading scientist and twentieth century thinker

Transdisciplinary Thinking and Acting Mathias Schüz, 2025-03-22 Complex problems can only be overcome with complex solutions This dictum by Albert Einstein also applies to current world problems such as climate change species extinction the littering of our planet and the growing gap between rich and poor They overwhelm individual scientific disciplines Therefore they can only be solved through transdisciplinarity i e beyond the individual disciplines in interaction with empirical knowledge of different provenance and philosophical reflection This first volume of the book series Transdisciplinary Management of Social and Ecological Crises explains how transdisciplinarity is to be understood in general what approaches exist and how they contribute to solving the various world problems In this context the book addresses among other things the replacement of man's claim to dominion over nature the overcoming of culturally determined boundaries in human communities and integrative and agile management methods in business politics art and society It deals with a sustainable circular economy new forms of politics in the interest of all instead of a few learning from artists healthy and environmentally sound nutrition and spiritual mindfulness in dealing with oneself and other ways of life Thus the book is aimed at a broad audience from different disciplines interested in the perspective of and interaction with other disciplines to solve global problems Chapter Methodology of

Eastman, 2020-12-10 In *Untying the Gordian Knot: Process, Reality and Context* Timothy E. Eastman proposes a new creative synthesis: the Logoi framework, which is radically inclusive and incorporates both actuality and potentiality to show how the fundamental notions of process logic and relations woven with triads of input/output/context and quantum logical distinctions can resolve a baker's dozen of age-old philosophic problems. Further, Eastman leverages a century of advances in quantum physics and the Relational Realism interpretation pioneered by Michael Epperson and Elias Zafiris and augmented by the independent research of Ruth Kastner and Hans Primas to resolve long-standing issues in understanding quantum physics. Adding to this, Eastman makes use of advances in information and complex systems semiotics and process philosophy to show how multiple levels of context combined with relations including potential relations both local and global can provide a grounding for causation, emergence and physical law. Finally, the Logoi framework goes beyond standard ways of knowing that of context independence, science and context-focus arts/humanities to demonstrate the inevitable role of ultimate context, meaning, spiritual dimension as part of a transformative ecological vision which is urgently needed in these times of human and environmental crises. Context, *Taxonomy of Learning*, **Epigenetics and Public Policy** Shea K.

Robison, 2018-04-19 When science changes, how does public policy respond? Epigenetics, the study of internal and environmental factors that affect how genes are turned on or off and how cells read those genes, is a rapidly emerging science akin to genetics that introduces a number of novel and unexpected biological explanations of human origins and development. It also poses fundamental challenges to many of the assumptions of the prevailing science of genetics. This book comprehensively considers the political implications of the emerging science of epigenetics in specific policy domains, addressing the intersections of epigenetics with cancer, obesity, the environment and the law. Shea K. Robison carefully navigates the messy history of genetics and epigenetics in order to explore what changes in public policy might come in the age of a new scientific frontier. Readers will understand how new findings in epigenetic research and increased acceptance of epigenetic science may lead to paradigm shifts in cancer prevention and treatment, significantly different policy solutions for combating obesity, and revised statutes of limitations and laws regarding civil and corporate liability and wrongful life.

Conceptualizing the World Helge Jordheim, Erling Sandmo, 2018-12-17 What is and what was the world Though often treated as interchangeable with the ongoing and inexorable progress of globalization concepts of world globe or earth instead suggest something limited and absolute This innovative and interdisciplinary volume concerns itself with this central paradox that the complex heterogeneous and purportedly transhistorical dynamics of globalization have given rise to the idea and reality of a finite and thus vulnerable world Through studies of illuminating historical moments that range from antiquity to the era of Google Earth each contribution helps to trace the emergence of the world in multitudinous representations practices and human experiences

Teaching Jung Kelly Bulkeley, Clodagh Weldon, 2011-08-24 Swiss psychologist Carl Jung 1875 1961 has made a major though still contested impact on the field of religious studies Alternately revered and reviled the subject of adoring memoirs and scathing exposes Jung and his ideas have had at least as much influence on religious studies as have the psychoanalytic theories of his mentor Sigmund Freud Teaching Jung offers a collection of original articles presenting several different approaches to Jung s psychology in relation to religion theology and contemporary culture The contributors describe their teaching of Jung in different academic contexts with special attention to the pedagogical and theoretical challenges that arise in the classroom Many of Jung s key psychological terms archetypes collective unconscious individuation projection synchronicity extroversion and introversion have become standard features of religious studies discourse and his extensive commentaries on various religious traditions make it clear that Jung s psychology is at one level a significant contribution to the study of human religiosity His characterization of depth psychology as a fundamentally religious response to the secularizing power of modernity has left a lasting imprint on the relationship between religious studies and the psychological sciences

Jung in

the 21st Century Volume Two , *Jung, Deleuze, and the Problematic Whole* Roderick Main, Christian McMillan, David Henderson, 2020-09-01 This book of expert essays explores the concept of the whole as it operates within the psychology of Jung the philosophy of Deleuze and selected areas of wider twentieth century Western culture which provided the context within which these two seminal thinkers worked Addressing this topic from a variety of perspectives and disciplines and with an eye to contemporary social political and environmental crises the contributors aim to clarify some of the epistemological and ethical issues surrounding attempts such as those of Jung and Deleuze to think in terms of the whole whether the whole in question is a particular bounded system such as an organism person society or ecosystem or most broadly reality as a whole Jung Deleuze and the Problematic Whole will contribute to enhancing critical self reflection among the many contemporary theorists and practitioners in whose work thinking in terms of the whole plays a significant role

Electromagnetism and the Metonymic Imagination Kieran M. Murphy, 2020-04-02 How does the imagination work How can it lead to both reverie and scientific insight In this book Kieran M Murphy sheds new light on these perennial questions by showing how they have been closely tied to the history of electromagnetism The discovery in 1820 of a mysterious relationship between electricity and magnetism led not only to technological inventions such as the dynamo and telegraph which ushered in the electric age but also to a profound reconceptualization of nature and the role the imagination plays in it From the literary experiments of Edgar Allan Poe Honor de Balzac Villiers de l Isle Adam and Andr Breton to the creative leaps of Michael Faraday and Albert Einstein Murphy illuminates how electromagnetism legitimized imaginative modes of reasoning based on a more acute sense of interconnection and a renewed interest in how metonymic relations could reveal the order of things Murphy organizes his study around real and imagined electromagnetic devices ranging from Faraday s world changing induction experiment to new types of chains and automata in order to demonstrate how they provided a material foundation for rethinking the nature of difference and relation in physical and metaphysical explorations of the world human relationships language and binaries such as life and death This overlooked exchange between science and literature brings a fresh perspective to the critical debates that shaped the nineteenth century Extensively researched and convincingly argued this pathbreaking book addresses a significant lacuna in modern literary criticism and deepens our understanding of both the history of literature and the history of scientific thinking

American Learned Men and Women with Czechoslovak Roots Mila Rechcigl, 2020-11-18 Apart from a few articles no comprehensive study has been written about the learned men and women in America with Czechoslovak roots That s what this compendium is all about with the focus on immigration from the period of mass migration and beyond irrespective whether they were born in their European ancestral homes or whether they have descended from them Czech and Slovak immigrants including Bohemian Jews have brought to the New World their talents their ingenuity their technical skills their scientific knowhow and their humanistic and spiritual upbringing reflecting upon the richness of their culture and traditions developed throughout centuries in their ancestral

home This accounts for the remarkable success and achievements of these settlers in their new home transcending through their descendants as this monograph demonstrates The monograph has been organized into sections by subject areas i e Scholars Social Scientists Biological Scientists and Physical Scientists Each individual entry is usually accompanied with literature and additional biographical sources for readers who wish to pursue a deeper study The selection of individuals has been strictly based on geographical ground without regards to their native language or ethical background This was because under the Habsburg rule the official language was German and any nationalistic aspirations were not tolerated Consequently it would be virtually impossible to determine their innate ethnic roots or how the respective individuals felt Doing it in any other way would be a mere guessing and thus less objective
