The Human Front:

Human Front Ken MacLeod, 2013-03-25 Ken MacLeod is one of the brightest and most progressive of Britain's Hard SF stars who navigate exciting new futures to the delight of legions of fans around the world. His works combine cutting edge scientific speculation, socialist and anarchist themes, and a deeply humanistic vision. Described by fans and adversaries alike as a techno-utopian socialist, MacLeod thrusts his characters into uncanny encounters that have included AI singularities, divergent human evolution, and posthuman cyborg resurrection. In his novella *The Human Front*, a young Scottish guerrilla fighter is drawn into low intensity sectarian war in a high intensity dystopian future, and the arrival of an alien intruder complete with saucer calls for new tactics and strange alliances. Its companion piece *Other Deviations*, first published in this edition, reveals the complex origins of MacLeod's alternate history. Plus *The Future Will Happen Here Too*, in which a Hebridean writer celebrates the landscapes that shaped his work, measures Scotland's past against humanity's future, and peers into the eyes of an eel. And featuring our irreverent *Outspoken Interview*, a candid and often cantankerous conversation that showcases our author's deep erudition and mordant wit.

The Human Semantic Potential Terry Regier, 1996 Drawing on ideas from cognitive linguistics, connectionism, and perception, *The Human Semantic Potential* describes a connectionist model that learns perceptually grounded semantics for natural language in spatial terms.

Languages differ in the ways in which they structure space and Regier's aim is to have the model perform its learning task for terms from any natural language. The system has so far succeeded in learning spatial terms from English, German, Russian, Japanese, and Mixtec. The model views simple movies of two dimensional objects moving relative to one another and learns to classify them linguistically in accordance with the spatial system of some natural language. The overall goal is to determine which sorts of spatial configurations and events are learnable as the semantics for spatial terms and which are not. Ultimately the model and its theoretical underpinnings are a step in the direction of articulating biologically based constraints on the nature of human semantic systems. Along the way Regier takes up such substantial issues as the attraction and the liabilities of PDP and structured connectionist modeling, the problem of learning without direct negative evidence, and the area of linguistic universals which is addressed in the model itself. Trained on spatial terms from different languages, the model permits observations about the possible bases of linguistic universals and interlanguage variation. **Humans vs Monsters**

David A. King Jr, 2019-01-31 The year is 1912. The world is reeling from the worldwide Great Depression which has left every nation on earth reeling financially. During this time two camps of nations have risen to prominence. The nations of America, France, England, and Russia, despite the economic collapses, have managed to start to pull themselves out of the Great Depression. On the other side is the UMN, the United Monster Nations, comprised of Transylvania, home of the vampires, Luciansburg, home of the werewolves or Lycans, Covenia, home of the Witches or Wiccans, and Decemus, home of the zombies or the walking dead. Both groups of nations are weary of one another. The UMN is ruled over with an iron hand by Grand Chancellor Alucard, who has brought to an end the centuries long war between the monster races and has had the monster clans united in their hatred of mankind. At the outset of our story, the UMN has been on a military buildup for more than ten years now and is planning a massed military assault against the human nations listed above for control of the Earth. Though they preach for peace with America, this is just a clever ruse by Lord Alucard to buy his nations more time to prepare for war. One can only imagine the horrors of a conventional war. Gone are the days of lining up soldiers and having them simply walk into oncoming fire. This is a new century with new ways of warfare. A conventional war could mean the deaths of countless millions of lives, both monster and human. The Human Body and Its Connexion with Man James John Garth Wilkinson, 1851

News and the Human Interest Story Helen MacGill Hughes, In this account of the growth of newspapers in modern industrial society, Helen Hughes traces the development of a mass audience through analysis of the origins of the human interest story in the popular ballads of an earlier day. She shows how such commonly found interests as a taste for news of the town, ordinary gossip, and moving or gripping tales with a legendary or mythic quality have reflected the tastes of ordinary folk from the days of illiterate audiences to the present. She explains how these interests ultimately were combined with practical economic and political information to create the substance and demand for a popular press. In describing the rise and fall of newspaper empires, each with their special readership attractions, Dr. Hughes shows how technological

innovation and idiosyncratic creativity were used by owners to capture and hold a reading audience. Once this audience developed, it could be fed a variety of messages beamed at reinforcing and maintaining both general and specific publics as well as a view of the world consonant with that of the publisher and major advertisers. Hughes offers a persuasive argument for the continuing viability of this method for combined social control, instruction, and amusement captured by the association of news and the human interest story.

Audran's the Proportions of the Human Body Tom Richardson, 2010-06. In 1683 Gerard Audran published a work entitled *Les Proportions du corps humain mesurées sur les plus belles figures de l'antiquité*. The illustrations are of the most famous antique sculptures with careful measurements of each. This book reviews that work from the perspective of his contemporaries and subsequent commentators and translates his words into English as well as reprinting his original plates for the modern student and providing some additional illustrations which help you to enjoy the plates on proportion.

The following chapters provide perspectives on modern autonomous systems such as self-driving cars and unmanned aerial systems directly from the professionals working with and studying them.
