**In Time of War** Adam J. Berinsky, 2009-10-15 From World War II to the war in Iraq periods of international conflict seem like unique moments in U S political history but when it comes to public opinion they are not To make this groundbreaking revelation In Time of War explodes conventional wisdom about American reactions to World War II as well as the more recent conflicts in Korea Vietnam the Gulf Afghanistan and Iraq Adam Berinsky argues that public response to these crises has been shaped less by their defining characteristics such as what they cost in lives and resources than by the same political interests and group affiliations that influence our ideas about domestic issues With the help of World War II era survey data that had gone virtually untouched for the past sixty years Berinsky begins by disproving the

myth of the good war that Americans all fell in line to support after the Japanese bombed Pearl Harbor The attack he reveals did not significantly alter public opinion but merely punctuated interventionist sentiment that had already risen in response to the ways that political leaders at home had framed the fighting abroad Weaving his findings into the first general theory of the factors that shape American wartime opinion Berinsky also sheds new light on our reactions to other crises He shows for example that our attitudes toward restricted civil liberties during Vietnam and after 9 11 stemmed from the same kinds of judgments we make during times of peace With Iraq and Afghanistan now competing for attention with urgent issues within the United States In Time of War offers a timely reminder of the full extent to which foreign and domestic politics profoundly influence and ultimately illuminate each other

**Science of Coercion** Christopher Simpson, 2015-03-03 A provocative and eye opening study of the essential role the US military and the Central Intelligence Agency played in the advancement of communication studies during the Cold War era now with a new introduction by Robert W McChesney and a new preface by the author Since the mid twentieth century the great advances in our knowledge about the most effective methods of mass communication and persuasion have been visible in a wide range of professional fields including journalism marketing public relations interrogation and public opinion studies However the birth of the modern science of mass communication had surprising and somewhat troubling midwives the military and covert intelligence arms of the US government In this fascinating study author Christopher Simpson uses long classified documents from the Pentagon the CIA and other national security agencies to demonstrate how this seemingly benign social science grew directly out of secret government funded research into psychological warfare It reveals that many of the most respected pioneers in the field of communication science were knowingly complicit in America s Cold War efforts regardless of their personal politics or individual moralities and that their findings on mass communication were eventually employed for the purposes of propaganda subversion intimidation and counterinsurgency An important thought provoking work Science of Coercion shines a blazing light into a hitherto remote and shadowy corner of Cold War history

revision or refinement of policy orientations 3 identify the types of research which would assess adequately the efficacy of the development and the application of PEQIs and 4 out line a realistic pragmatic research strategy that relates to potential uses and identified policy issues The workshops were supported by a grant from the National Science Foundation No GSOC75 0782 and were held during the spring and summer of 1975 in Amherst Massachusetts and New York City Contributed chapters for this volume were commissioned with funds from the Institute for Man and Environment University of Massachusetts Scientific contributors to the understanding of environmental perception have increased substantially over the last decade along with recognition that this realm of knowledge is crucial for an informed perspective on the impact of man on the environment At the same time there exists general consensus that the field remains diffuse and uncoordinated Lowenthal 1972b
