Abstract

The primary trends defining the paths toward sustainable development in rural areas of Bulgaria underscore the significant influence of human resources, and the priorities are oriented towards stimulation of the vocational training and science based skills, obtained through appropriate education and specialized training, and leading to success in the development and management of the local economy. The tendency, related to the problem is highlighted as the shortage of adequately educated and skilled entrepreneurs capable of harnessing technological advantages in agricultural production and implementing innovative technologies. The goal of our study is related to investigation and summarization of basic tendencies in this aspect, within Bulgarian agricultural enterprises, the emphasis lies on the crucial connection between theoretical knowledge and hands-on experience, particularly highlighting the importance of educating and training agricultural producers. The education and practical application of scientific knowledge by those engaged in agriculture are vital components for achieving success and ensuring the sustainability of economic endeavours at the local level. By promoting education and training for individuals involved in agricultural activities in the agrarian sector, the agriculture guarantees its sustainable and efficient development, which without doubt reflects on the increase of the sustainability of the rural territories, as a whole. The results of the study formulate guidelines, conclusions and recommendations related to recognition of the need of ensuring the proper education and training of agricultural producers, especially in the realm of environmentally friendly practices and innovative technologies. In conclusion, the synthesized research findings provide insight into the tendencies in basic strategic documents supporting knowledge, as well as data for the educational status in the Bulgarian agrarian sector regarding the potential and significance of the human factor. Future guidelines for the study in the sphere of human resources are outlined in the modern agriculture and the Bulgarian rural territories.

Key words: human factor, education, training, agricultural producers, rural territories.

INTRODUCTION

The Common Agricultural Policy (CAP) [7, 19], for the period 2023-2027 has decisive significance for the development of rural areas and for guaranteeing the future of the agriculture. The main factor for the successful fulfilment of the planned goals are the human resources [33, 36]. In the present report we turn the attention towards the significance of the human thought for the future via transmission and reception of knowledge and we emphasize precisely on this potential of the human factor. The new legislation, in effect from 1st January 2023, suggests a fairer and more ecological CAP, based to a greater

extent on the results, which will be implemented by the practices and the approach of the agricultural producers in their practical work [13]. Here is the point of intersection, on which we are placing our emphasis in the present study, between the following factors for achieving the capacity required for the contemporary requirements and conditions and scientific and vocational training of the human resources, as well as conditions for achieving sustainability in the development of the rural territories:

-the relation between the theoretical training and practical work (all changes and guidelines in the new CAP are based on
