Sphere Packings Lattices And Groups Grundlehren Der Mathematischen Wissenschaften:

Sphere Packings, Lattices and Groups John H. Conway, Neil J.A. Sloane, 2013-04-17 The main themes This book is mainly concerned with the problem of packing spheres in Euclidean space of dimensions 1 2 3 4 5 Given a large number of equal spheres what is the most efficient or densest way to pack them together We also study several closely related problems the kissing number problem which asks how many spheres can be arranged so that they all touch one central sphere of the same size the covering problem which asks for the least dense way to cover n dimensional space with equal overlapping spheres and the quantizing problem important for applications to analog to digital conversion or data compression which asks how to place points in space so that the average second moment of their Voronoi cells is as small as possible Attacks on these problems usually arrange the spheres so their centers form a lattice Lattices are described by quadratic forms and we study the classification of quadratic forms Most of the book is devoted to these five problems The miraculous enters the E_8 and Leech lattices When we investigate those problems some fantastic things happen There are two sphere packings one in eight dimensions the E_8 lattice and one in twenty four dimensions the Leech lattice A which are unexpectedly good and very 24 symmetrical packings and have a number of remarkable and mysterious properties not all of which are completely understood even today

Sphere Packings, Lattices and Groups John Conway, Neil J. A. Sloane, 2013-06-29 We now apply the algorithm above to find the 121 orbits of norm 2 vectors from the known norm 0 vectors and then apply it again to find the 665 orbits of norm 4 vectors from the vectors of norm 0 and 2 The neighbors of a strictly 24 dimensional odd unimodular lattice can be found as follows If a norm 4 vector $v \in \Lambda$ corresponds to the sum $25 \cdot 1$ of a strictly 24 dimensional odd unimodular lattice A and a dimensional lattice then there are exactly two norm 0 vectors of Λ having inner product 2 with v and these norm 0 vectors correspond to the two even neighbors of A The enumeration of the odd 24 dimensional lattices Figure 17.1 shows the neighborhood graph for the Niemeier lattices which has a node for each Niemeier lattice If A and B are neighboring Niemeier lattices there are three integral lattices containing A and B namely $A+B$ and an odd unimodular lattice C of rank 24 An edge is drawn between nodes A and B in Fig 17.1 for each strictly 24 dimensional unimodular lattice arising in this way Thus there is a one to one correspondence between the strictly 24 dimensional odd unimodular lattices and the edges of our neighborhood graph The 156 lattices are shown in Table 17.1 Figure 17.1 also shows the corresponding graphs for dimensions 8 and 16

Sphere Packings, Lattices and Groups J.H. Conway, N.J.A. Sloane, 2013-03-09 The second edition of this timely definitive and popular book continues to pursue the question what is the most efficient way to pack a large number of equal spheres in n dimensional Euclidean space The authors also continue to examine related problems such as the kissing number problem the covering problem the quantizing problem and the classification of lattices and quadratic forms Like the first edition the second edition describes the applications of these questions to other areas of mathematics and science such as number theory coding theory group theory analog to digital conversion and data compression n

dimensional crystallography and dual theory and superstring theory in physics Results as of 1992 have been added to the text and the extensive bibliography itself a contribution to the field is supplemented with approximately 450 new entries

Sphere Packings, Lattices, and Groups John Horton Conway, Neil James Alexander Sloane, 1993 , **Diophantine Methods, Lattices, and Arithmetic Theory of Quadratic Forms** Wai Kiu Chan, Lenny Fukshansky, Rainer Schulze-Pillot, Jeffrey D. Vaaler, 2013 This volume contains the proceedings of the International Workshop on Diophantine Methods Lattices and Arithmetic Theory of Quadratic Forms held November 13 18 2011 at the Banff International Research Station Banff Alberta Canada The articles in this volume cover the arithmetic theory of quadratic forms and lattices as well as the effective Diophantine analysis with height functions Diophantine methods with the use of heights are usually based on geometry of numbers and ideas from lattice theory The target of these methods often lies in the realm of quadratic forms theory There are a variety of prominent research directions that lie at the intersection of these areas a few of them presented in this volume Representation problems for quadratic forms and lattices over global fields and rings including counting representations of bounded height Small zeros with respect to height of individual linear quadratic and cubic forms originating in the work of Cassels and Siegel and related Diophantine problems with the use of heights Hermite s constant geometry of numbers explicit reduction theory of definite and indefinite quadratic forms and various generalisations Extremal lattice theory and spherical designs *Scale-isometric Polytopal Graphs In Hypercubes And Cubic Lattices: Polytopes In Hypercubes And Zn* Michel-marie Deza, Viacheslav Grishukhin, Mikhail I Shtogrin, 2004-02-13 This monograph identifies polytopes that are combinatorially 1 embeddable within interesting lists of polytopal graphs i e such that corresponding polytopes are either prominent mathematically regular partitions root lattices uniform polytopes and so on or applicable in chemistry fullerenes polycycles etc The embeddability if any provides applications to chemical graphs and in the first case it gives new combinatorial perspective to 2 prominent affine polytopal objects The lists of polytopal graphs in the book come from broad areas of geometry crystallography and graph theory The book concentrates on such concise and as much as possible independent definitions The scale isometric embeddability the main unifying question to which those lists are subjected is presented with the minimum of technicalities **Discrete Geometry and Algebraic Combinatorics** Alexander Barg, Oleg R. Musin, 2014-08-28 This volume contains the proceedings of the AMS Special Session on Discrete Geometry and Algebraic Combinatorics held on January 11 2013 in San Diego California The collection of articles in this volume is devoted to packings of metric spaces and related questions and contains new results as well as surveys of some areas of discrete geometry This volume consists of papers on combinatorics of transportation polytopes including results on the diameter of graphs of such polytopes the generalized Steiner problem and related topics of the minimal fillings theory a survey of distance graphs and graphs of diameters and a group of papers on applications of algebraic combinatorics to packings of metric spaces including sphere packings and topics in coding theory In particular this volume presents a new

approach to duality in sphere packing based on the Poisson summation formula applications of semidefinite programming to spherical codes and equiangular lines new results in list decoding of a family of algebraic codes and constructions of bent and semi bent functions **Advances in Cryptology - CRYPTO 2007** Alfred Menezes,2007-08-10 This volume constitutes the refereed proceedings of the 27th Annual International Cryptology Conference held in Santa Barbara California in August 2007 Thirty three full papers are presented along with one important invited lecture The papers address current foundational theoretical and research aspects of cryptology cryptography and cryptanalysis In addition readers will discover many advanced and emerging applications **Designs and Their Codes** E. F. Assmus,J. D. Key,1994-01-06 A self contained account suited for a wide audience describing coding theory combinatorial designs and their relations **Modern Trends in Constructive Function Theory** E. B. Saff,Douglas Patten Hardin,Doron Shaul Lubinsky,Brian Z. Simanek,2016-03-31 Contains the proceedings of the conference Constructive Functions 2014 held in May 2014 The papers in this volume include results on polynomial approximation rational approximation Log optimal configurations on the sphere random continued fractions ratio asymptotics for multiple orthogonal polynomials the bivariate trigonometric moment problem and random polynomials *Random and Quasi-Random Point Sets* Peter Hellekalek,Gerhard Larcher,2012-12-06 This volume is a collection of survey papers on recent developments in the fields of quasi Monte Carlo methods and uniform random number generation We will cover a broad spectrum of questions from advanced metric number theory to pricing financial derivatives The Monte Carlo method is one of the most important tools of system modeling Deterministic algorithms so called uniform random number gen erators are used to produce the input for the model systems on computers Such generators are assessed by theoretical a priori and by empirical tests In the a priori analysis we study figures of merit that measure the uniformity of certain high dimensional random point sets The degree of uniformity is strongly related to the degree of correlations within the random numbers The quasi Monte Carlo approach aims at improving the rate of conver gence in the Monte Carlo method by number theoretic techniques It yields deterministic bounds for the approximation error The main mathematical tool here are so called low discrepancy sequences These quasi random points are produced by deterministic algorithms and should be as super uniformly distributed as possible Hence both in uniform random number generation and in quasi Monte Carlo methods we study the uniformity of deterministically generated point sets in high dimensions By a common abuse of language one speaks of random and quasi random point sets The central questions treated in this book are i how to generate ii how to analyze and iii how to apply such high dimensional point sets **Proofs from THE BOOK** Martin Aigner,Günter M. Ziegler,2013-06-29 The mathematical heroes of this book are perfect proofs brilliant ideas clever connections and wonderful observations that bring new insight and surprising perspectives on basic and challenging problems from Number Theory Geometry Analysis Combinatorics and Graph Theory Thirty beautiful examples are presented here They are candidates for The Book in which God records the perfect proofs according to the late Paul Erd s who himself suggested many of the topics

in this collection The result is a book which will be fun for everybody with an interest in mathematics requiring only a very modest undergraduate mathematical background **Geometry of Cuts and Metrics** Michel Marie Deza, Monique Laurent, 2009-11-12 Cuts and metrics are well known objects that arise independently but with many deep and fascinating connections in diverse fields in graph theory combinatorial optimization geometry of numbers combinatorial matrix theory statistical physics VLSI design etc This book presents a wealth of results from different mathematical disciplines in a unified comprehensive manner and establishes new and old links which cannot be found elsewhere It provides a unique and invaluable source for researchers and graduate students From the Reviews This book is definitely a milestone in the literature of integer programming and combinatorial optimization It draws from the Interdisciplinarity of these fields With knowledge about the relevant terms one can enjoy special subsections without being entirely familiar with the rest of the chapter This makes it not only an interesting research book but even a dictionary The longer one works with it the more beautiful it becomes Optima 56 1997 *Algorithmic Number Theory* J.
