## **Sport And Exercise Pharmacology:**

**Exercise and Sport Pharmacology** Mark Mamrack, 2020-07-28 Exercise and Sport Pharmacology is an essential book for teaching upper level undergraduates or entry level graduate students about how drugs can affect exercise and how exercise can affect the action of drugs. It leads students through the related pathology, exercise physiology, and drug action of many of today's chronically used medications and discusses how drugs can affect exercise performance. This new second edition of the book is divided into four parts. Section I provides the basics of pharmacology, exercise physiology, autonomic pharmacology, and the stress response. Section II presents chapters on major cardiovascular and respiratory drug classes. Section III describes frequently prescribed medications for such common conditions as diabetes, depression, pain, fever, inflammation, and obesity, and Section IV includes discussions of nutritional supplements and commonly used drugs such as caffeine, nicotine, cannabis, and performance enhancing drugs. The second edition offers many updates, enhances muscle cell physiology, includes the involvement of the gut microbiome, and each chapter has a new section on the effects of aging. In Sections II and III, chapters include an overview of the pathology that therapeutic drugs are designed to treat and how the drug works in the human body. In contrast to standard pharmacology texts, Exercise and Sport Pharmacology also includes the effect of exercise on the pathology of the condition and the effect of exercise on how the body responds to a drug. Each chapter has a section on whether the drugs under discussion have performance enhancing potential. Section IV is concerned with self-medication and drugs or supplements taken without a prescription or with limited medical supervision. Throughout, figures and tables as well as data from experiments in exercise pharmacology help to illustrate and summarize content. Each chapter opens with an on-going case example to preview and apply chapter content. In the text, boldface terms indicate which concepts are contained in the book's Glossary. Chapters conclude with a Key Concepts Review and Review Questions.

*Exercise and Sport Pharmacology* Mark D. Mamrack, 2017-02-09 Exercise and Sport Pharmacology is an accessible book that will be useful for teaching upper level undergraduates or entry level graduate students about how drugs can affect exercise and as well as how exercise can affect the action of drugs. It leads students through the science, including the related pathology, exercise physiology, and drug action, to gain an understanding of these interactions. The book is divided into four parts. Part I provides the basics of exercise pharmacology, exercise physiology, and autonomic pharmacology. Part II presents chapters on the major cardiovascular and respiratory drug classes. Part III describes the frequently prescribed medications for such common conditions as diabetes, depression, pain, fever, inflammation, and obesity, and Part IV includes discussions of supplements and commonly used drugs such as caffeine, nicotine, cannabis, and performance enhancing drugs. In Parts II through IV, the chapters include an overview of the pathology the drugs are designed to treat, how the drug works in the human body, the effect of exercise on how the body responds to a drug, and how exercise changes the fate of the drug in the body. Chapters also include information on the drug's possible health risks and whether taking the drug comes under scrutiny.
