The Mercury 13 Martha Ackmann, 2004-07-13. For readers of *The Astronaut Wives Club*, *The Mercury 13* reveals the little-known true story of the remarkable women who trained for NASA space flight. In 1961, just as NASA launched its first man into space, a group of women underwent secret testing in the hopes of becoming America's first female astronauts. They passed the same battery of tests at the legendary Lovelace Foundation as did the Mercury 7 astronauts, but they were summarily dismissed by the boys' club at NASA and on Capitol Hill. The USSR sent its first woman into space in 1963; the United States did not follow suit for another twenty years. For the first time, Martha Ackmann tells the

story of the dramatic events surrounding these thirteen remarkable women all crackerjack pilots and patriots who sometimes sacrificed jobs and marriages for a chance to participate in America's space race against the Soviet Union. In addition to talking extensively to these women, Ackmann interviewed Chuck Yeager, John Glenn, Scott Carpenter and others at NASA and in the White House with firsthand knowledge of the program and includes here never before seen photographs of the Mercury 13 passing their Lovelace tests. Despite the crushing disappointment of watching their dreams being derailed, the Mercury 13 went on to extraordinary achievement in their lives. Jerrie Cobb, who began flying when she was so small she had to sit on pillows to see out of the cockpit, dedicated her life to flying solo missions to the Amazon rain forest. Wally Funk, who talked her way into the Lovelace trials, went on to become one of the first female FAA investigators. Janey Hart, mother of eight and at age forty the oldest astronaut candidate, had the political savvy to steer the women through congressional hearings and later helped found the National Organization for Women. A provocative tribute to these extraordinary women, *The Mercury 13* is an unforgettable story of determination, resilience, and inextinguishable hope. — *The Science of James Bond* Lois H. Gresh, Robert Weinberg, 2008-04-21

The science behind the gadgets exploits and enemies of the world's greatest spy. From the sleek Aston Martin that spits out bullets, nails, and passengers at the push of a button to the microjet that makes hairpin turns to avoid a heat-seeking missile, the science and technology of James Bond films have kept millions of movie fans guessing for decades. Are these amazing feats and gadgets truly possible? *The Science of James Bond* takes you on a fascinating excursion through the true science that underlies Bond's most fantastic and off-the-wall accoutrements. The acclaimed science-fiction authors Lois Gresh and Robert Weinberg provide a highly entertaining, informative look at the real-world achievements and brilliant imaginations behind such singular Bond gadgets as the buzz saw Rolex, the car that turns into a submarine, and the ever-popular rocket-firing cigarette. They examine hundreds of Q Division's ingenious inventions, analyze Bond's astonishing battles beneath the earth and sea, in the skies, and even in outer space, and ask intriguing questions that lead to enlightening discussions about the limits of science, the laws of nature, and the future of technology. Filled with entertaining anecdotes from Bond movie shoots and supplemented with tech ratings for all of the Bond movies, *The Science of James Bond* separates scientific fact from film fantasy with some very surprising results. — *New Cosmic Horizons* David Leverington, 2000

New Cosmic Horizons tells the extraordinary story of space-based astronomy since the Second World War. Starting with the launch of the V2 rocket in 1946, this book explores the triumphs of space experiments and spacecraft designs and the amazing astronomical results that they have produced. It also examines the fascinating way in which the changing political imperatives of the USA, USSR, and Western Europe have modified their space astronomy programmes. This history of astronomy from space is extensively illustrated and unique in its coverage of such a broad range of topics in language accessible to amateur and professional astronomers and other technically minded readers. All major astronomy missions of the first fifty years of space research are covered: the Soviet Sputnik and American Explorer projects.

the subsequent race to the moon solar and planetary missions and the wonders of modern astrophysics culminating in the exciting results of the Hubble Space Telescope
